Scope

The scope of the study refers to the parameters under which the study will be operating. The problem you seek to resolve will fit within certain parameters. Think of the scope as the domain of your research—what's in the domain, and what is not. You need to make it as clear as possible what you will be studying and what factors are within the accepted range of your study. For example, if you are studying the ill effects of bullying on middle school children, the scope could include both face-to-face bullying and cyber-bullying in grades 6 through 8.

Limitations

Limitations are matters and occurrences that arise in a study which are out of the researcher's control. They limit the extensivity to which a study can go, and sometimes affect the end result and conclusions that can be drawn. Every study, no matter how well it is conducted and constructed, has limitations. This is one of the reasons why we do not use the words "prove" and "disprove" with respect to research findings. It is always possible that future research may cast doubt on the validity of any hypothesis or conclusion from a study. Your study might have access to only certain people in an organization, certain documents, and certain data. These are limitations. Subsequent studies may overcome these limitations.

Limitations of Qualitative Studies

A limitation associated with qualitative study is related to validity and reliability. "Because qualitative research occurs in the natural setting it is extremely difficult to replicate studies" (Wiersma, 2000, p. 211). When you select certain methodologies and designs, for example phenomenology, they come with limitations over which you may have little control.

Scope Limitations And Delimitations

PhD**

Scope Limitations And Delimitations:

Blue Wall of Silence Olivia N. Johnson, 2010-04-26 Suicide has been declared an epidemic and rates of suicide increase within occupational subcultures experiencing increased levels of stress and trauma such as law enforcement. Explored in the qualitative phenomenological study were the lived experiences of White male law enforcement officers concerning perceptions of care by administrators and peers and the influence of mental health training in the incidence of officer suicide. The study population was chosen because of the resemblance to the segment of the general population deemed at risk for suicide. Officers provided perceptions of care in dealing with difficult situations, police culture, police training, and police suicide. Interviews allowed officers to reveal perceptions and beliefs about the affects of training on perceptions of care and on the incidence of officer suicide. Officer interviews revealed five major themes and two minor themes. Major themes included stress, stress relief, trust, loyalty, training, and change. Minor themes included generational issues and organizational administration. The largest stressor for the study population included crimes and incidents against children. The results of the study can help further educate administrators and officers about the emotional dangers facing law enforcement officers and the importance of organizational administration in assisting officers in acknowledging and overcoming issues concerning mental health.

The Effectiveness of Interdisciplinary Team Dynamics on Treatments in a Behavioral Health Environment Gilton C. Grange, 2008 The style of leadership in an interdisciplinary collaboration is an existing gap in collaborative literature. Studying the leaders in an existing interdisciplinary collaboration provided a description of the leadership style of the collaborative leaders of three behavioral health teams in New York City. This qualitative phenomenological study used structured interviews of interdisciplinary disciplines to describe the leadership style of the collaborative leaders within a team environment. The data collection and analysis were conducted using codes to identify dominant themes. The themes presented perceptions and experiences of three teams interacting collaboratively. The coding process identified five major themes that are unique components of leadership that suggests new methods of building collaborative leadership within the interdisciplinary team dynamics.

A Study of the Relationship Between School Culture and Standardized Test Scores Andrew Lee Smith, 2008-06 The purpose of this quantitative study was to discover the perceptions of school culture and correlate those perceptions with standardized test scores in elementary and secondary schools in southwestern Arizona. The intention of this study was to contribute to the field of education leadership related to student achievement and factors contributing to student achievement including organizational culture. A survey of teachers and administrators in participating schools in southwestern Arizona was completed and correlated with existing student achievement data for those participating schools. The School Culture Survey by Leithwood, Aitken, and Jantzi, 2001, was used for the survey instrument and the Stanford Achievement Test Ninth Edition was used to measure student achievement. The survey results and student achievement data were correlated and revealed that a relationship does exist between perceptions of school culture and student achievement.

Stakeholders of Terrorism and the Caribbean Emanuel Quashie, 2023-08-30 The book ambitiously seeks to shape our understanding of terrorism by offering a more systematic interpretation of terrorism activism through the Stakeholders of Terrorism concept. The author presents an original assessment of terrorism broadly and specifically within the context of the Caribbean through the Stakeholders of Terrorism concept with a view to help the region enhance its counterterrorism policies nationally, regionally, that recognises the complex inherent duality. In doing so, the author first borrows from and adds to the prevailing literature as it relates to the various explanatory frameworks: psychology, religion, strategy, culture, civilization, context, politics, and economic dimensions, and the specific stakeholders of terrorism: U.S. mainstream media, ISIS, and individual actors like lone wolf. The Stakeholders of Terrorism concept argues more broadly the existence of an inherent duality, a multiplicity of intangible and tangible negatives and positives that are simultaneously present in most situations concerning terrorism activism.

Research Methods and Statistics for Cross-Cutting Research Ephraim Matanda, 2022-08-05 This book is on research methods and statistics for cross-cutting research. Framed from a multi-disciplinary perspective, the book presents and grapples with research methods and approaches used in research across disciplines. It magnifies the different contexts where research methods intersect and complement each other for effective data collection and analysis. Noting that most of the texts on research are field or subject specific regardless of the fact that most research methods and approaches today are complementary and overlapping, the book advances the argument that it is high time that researchers consider producing and using research texts that are multi-disciplinary and promote generative dialogue across fields. The novelty and richness of the book lie in its attempt to offer nuanced research methods and statistics all in one book which can be used in different disciplines and situations. More importantly, and without romanticising the potential of multi-disciplinary research, the book

offers added insights and pointers on trends and evolutions in contemporary research The book is an important addition to debates on contemporary research and multi disciplinary discourses that have taken centre stage in recent years in many universities across the world The book is handy to students and practitioners across fields **Introduction to Educational Research** Craig A.
