Athanatopoulou, Konstantinos Morfidis, Anastasios Sextos, Agathoklis Giaralis, 2015-11-18. This book aims to serve as an essential reference to facilitate civil engineers involved in the design of new conventional ordinary reinforced concrete R/C buildings regulated by the current European EC8 EN 1998-1:2004 and EC2 EN 1992-1-1:2004 codes of practice. The book provides unique step-by-step flowcharts which take the reader through all the required operations, calculations, and verification checks prescribed by the EC8 provisions. These flowcharts are complemented by comprehensive discussions and practical explanatory comments on critical aspects of the EC8 code-regulated procedure for the earthquake-resistant design of R/C buildings. Further detailed analysis and design examples of typical multi-storey three-dimensional R/C buildings are included to illustrate the required steps for achieving designs of real-life structures which comply with the current EC8 provisions. These examples can be readily used as verification tutorials to check the reliability of custom-made computer programs and of commercial Finite Element software developed and used for the design of earthquake-resistant R/C buildings complying with the EC8 EN 1998-1:2004 code. This book will be of interest to practitioners working in consulting and design engineering companies and to advanced undergraduate and postgraduate level civil engineering students attending courses and curricula in the earthquake-resistant design of structures and/or undertaking pertinent design projects.
