Knowledge Representation, Reasoning, and the Design of Intelligent Agents Michael Gelfond, Yulia Kahl, 2014-03-10 Knowledge representation and reasoning is the foundation of artificial intelligence declarative programming and the design of knowledge intensive software systems capable of performing intelligent tasks Using logical and probabilistic formalisms based on answer set programming ASP and action languages this book shows how knowledge intensive systems can be given knowledge about the world and how it can be used to solve non trivial computational problems The authors maintain a balance between mathematical analysis and practical design of intelligent agents All the concepts such as answering queries planning diagnostics and probabilistic reasoning are illustrated by programs of ASP The text can be used for AI related undergraduate and graduate classes and by researchers who would like to learn more about ASP and knowledge representation

Answer Set Programming ASP because the language of ASP is suitable for our purpose. The two main reasons are that first ASP has non monotonic features which allow us to represent defaults inertia rule incomplete information and causality. Second ASP has a clear semantics. That is a precise meaning is associated with every logic program so that we know how to answer queries about. The intuition of the answer sets is that these are beliefs of an intelligent agent. Moreover there are fast inference mechanisms available for ASP such as Smodels and DLV. We illustrate using two different domains that ASP is powerful and usable for commonsense knowledge representation and reasoning. Although we mention the use of ASP in few domains it is in fact effective for a broader range of applications. In addition we reference the use of event calculus as another tool for commonsense reasoning. Even though we use the definition of commonsense knowledge from McCarthy we also review different points of view from psychologists and computer science researchers from diverse areas. *ECAI 88* Bernd Radig, 1988. An Answer Set Programming Based Approach to Representing and Querying Textual Knowledge Dhruva Rajan Pendharkar, 2018. Knowledge Representation and Reasoning KR R is a field of Artificial Intelligence that deals with converting information into knowledge in a form that the computer can process. It applies concepts from the field of psychology about how humans make rational decisions to build formal rules that model the human cognitive processes. Using the generated knowledge bases the computer is then able to solve complex tasks like question answering summarization automated reasoning medical diagnosis and many more. Many of these complex tasks mentioned above require an understanding of natural language text. A vast amount of knowledge that we have today comes from books and is in the form of natural language text. Such knowledge is in an unstructured form and is not easily interpretable by computers. An approach based on answer set programming ASP is proposed in this thesis for representing knowledge generated from natural language text. This knowledge is then used to perform reasoning with the help of advanced implementations of ASP such as s ASP. ASP representation of techniques such as default reasoning hierarchical knowledge organization negation as failure etc are used to model common sense reasoning methods required to accomplish this task. Automation of the question answering task has been used in this thesis to demonstrate the effectiveness of our ASP based KR R techniques. The automated Q A system developed as part of this thesis parses and converts natural language text to an ASP knowledge base. Users can pose questions in a natural language that are parsed and converted into ASP queries automatically. These queries are next solved against the knowledge base obtained from the natural language text augmented with related auxiliary knowledge obtained from other resources such as WordNet. In contrast to approaches based on machine learning our system answers questions based on actually understanding the text. This approach has been tested on the SQuAD dataset and the results are promising.

Dissertation Abstracts International, 1993-05 **Knowledge Representation, Reasoning and Declarative Problem Solving** Chitta Baral, 2003-01-09. Knowledge management and knowledge based intelligence are areas of importance in the economy and society and to exploit them fully and efficiently it is necessary both to represent and reason

about knowledge via a declarative interface whose input language is based on logic In this book originally published in 2003 Chitta Baral shows exactly how to go about doing that how to write programs that behave intelligently by giving them the ability to express knowledge and reason about it He presents a language AnsProlog for both knowledge representation and reasoning and declarative problem solving The results have been organised here into a form that will appeal to practising and would be knowledge engineers wishing to learn more about the subject either in courses or through self teaching A comprehensive bibliography rounds off the book
