Nonstandard Methods in Ramsey Theory and Combinatorial Number Theory Mauro Di Nasso, Isaac Goldbring, Martino Lupini, 2019-05-23 The goal of this monograph is to give an accessible introduction to nonstandard methods and their applications with an emphasis on combinatorics and Ramsey theory It includes both new nonstandard proofs of classical results and recent developments initially obtained in the nonstandard setting This makes it the first combinatorics focused account of nonstandard methods to be aimed at a general graduate level mathematical audience This book will provide a natural starting point for researchers interested in approaching the rapidly growing literature on combinatorial results obtained via nonstandard methods The primary audience consists of graduate students and specialists in logic and combinatorics who wish to pursue research at the interface between these areas

Monotone Iterative Techniques for

Discontinuous Nonlinear Differential Equations Seppo Heikkilä, V. Lakshmikantham, 2017-09-29 Providing the

theoretical framework to model phenomena with discontinuous changes this unique reference presents a generalized monotone iterative method in terms of upper and lower solutions appropriate for the study of discontinuous nonlinear differential equations and applies this method to derive suitable fixed point theorems in ordered abstract spaces

Nonstandard Models of Arithmetic and Set Theory Ali Enayat, Roman Kossak, 2004 This is the proceedings of the AMS special session on nonstandard models of arithmetic and set theory held at the Joint Mathematics Meetings in Baltimore MD The volume opens with an essay from Haim Gaifman that probes the concept of non standardness in mathematics and provides a fascinating mix of historical and philosophical insights into the nature of nonstandard mathematical structures In particular Gaifman compares and contrasts the discovery of nonstandard models with other key mathematical innovations such as the introduction of various number systems the modern concept of function and non Euclidean geometries Other articles in the book present results related to nonstandard models in arithmetic and set theory including a survey of known results on the Turing upper bounds of arithmetic sets and functions The volume is suitable for graduate students and research mathematicians interested in logic especially model theory

A Modular Calculus for the Average Cost of Data Structuring Michel Schellekens, 2008-06-17 A Modular Calculus for the Average Cost of Data Structuring introduces MOQA a new domain specific programming language which guarantees the average case time analysis of its programs to be modular Time in this context refers to a broad notion of cost which can be used to estimate the actual running time but also other quantitative information such as power consumption while modularity means that the average time of a program can be easily computed from the times of its constituents something that no programming language of this scope has been able to guarantee so far MOQA principles can be incorporated in any standard programming language MOQA supports tracking of data and their distributions throughout computations based on the notion of random bag preservation This allows a unified approach to average case time analysis and resolves fundamental bottleneck problems in the area The main techniques are illustrated in an accompanying Flash tutorial where the visual nature of this method can provide new teaching ideas for algorithms courses This volume with forewords by Greg Bollella and Dana Scott presents novel programs based on the new advances in this area including the first randomness preserving version of Heapsort Programs are provided along with derivations of their average case time to illustrate the radically different approach to average case timing The automated static timing tool applies the Modular Calculus to extract the average case running time of programs directly from their MOQA code A Modular Calculus for the Average Cost of Data Structuring is designed for a professional audience composed of researchers and practitioners in industry with an interest in algorithmic analysis and also static timing and power analysis areas of growing importance It is also suitable as an advanced level text or reference book for students in computer science electrical engineering and mathematics Michel Schellekens obtained his PhD from Carnegie Mellon University following which he worked as a Marie Curie Fellow at Imperial College London Currently he is an Associate Professor at the

Glaser,2012-12-06 To all who taught me and to all who will Over the past fifteen years the notions of efficiency and sustainability have more than any others influenced the academic and public discussion concerning the intertemporal allocation of resources especially as regards the economics of growth and environment This treatise formally develops and counterposes these notions by means of the construct of a trajectorial objective which is here developed along with its implications as a natural advance upon the classical scalar objective In the course of this study it becomes clear that efficiency and sustainability are by no means identical given that efficiency on the one hand is the concept for avoiding wasteful behavior and sustainability on the other is the concept for ensuring that certain critical aspiration levels which usually reflect the wish for survival are maintained Nonetheless contrary to what may be assumed these two concepts do not generally yield mutually exclusive solutions in fact they can be combined to complement each other in the quest for unimprovable long term solutions which sustain given and necessary aspiration levels This treatise develops and analyzes dynamic decision models DDM with one trajectorial objective according to the methodology of multi criteria decision making MCDM Moreover introducing the method of distance maximization crucially augments MCDM and proves to be invaluable for DDMs in the case of a nonexistent utopia trajectory as well as in the case of sustainability as objective **Choice** ,1978

kind of meeting we have included plasma physics which presents a number of most fascinating problems with respect to instabilities formation of structures and related phenomena **Subject Guide to Books in Print** ,1975 Mathematics + Physics Ludwig Streit,1986 This volume focuses on differential equations such as for hydrodynamics solitary waves relativistic field theory stochastic analysis as well as their interplay which has been attracting a growing interest in recent years
