Kannaiyan,K. Kumar,K. Govindarajan,2010-04-01 Rice based cropping system is the major cropping system practised in India which includes the rotation of crops involving rice pulses oil seeds cotton sugar cane green manures etc The rice based cropping system offers lot of scope for the effective utilization of a wide range of biofertilizers such as Azolla BGA Azospirillum Rhizobium Gluconacetobacter diazotrophicus and other heterotrophic N₂ fixing bacteria which help to increase the yield by reducing the cost of cultivation It thus has dual advantages of being sustainable without endangering the environment and being highly cost effective This book Biofertilizer Technology for Rice Based Cropping System deals with the current developments in the basic and applied aspects of biofertilizers used in the rice based cropping including the novel endophytic diazotrophs viz Azorhizobium caulinodans Gluconacetobacter diazotrophicus Pink Pigmented Facultative Methylophiles PPFM etc The role of P Zn and Si solubilizers in the nutrient dynamics of the rice ecosystem has also been covered The strategies for production and distribution of quality inoculants for rice based cropping system has been given due importance with a focus on the molecular approaches for rapid and reliable quality control of biofertilizers This book can be considered as a monograph on the usage of biofertilizers in rice based cropping system It will be very useful for the scientists researchers students and extension workers involved in the management of crops in rice based cropping system *Legumes Biofortification* Muhammad Azhar Nadeem,Faheem Shehzad Baloch,Sajid Fiaz,Muhammad Aasim,Ephrem Habyarimana,Osman Sönmez,Nusret Zencirci,2023-11-08 Sustainable food production is vital to ensure food and nutritional security to growing human population Recently there has been a shift in agricultural production system crop production is not only considering yield as primary interest to produce higher number of calories for reducing hunger but also more nutrient rich food to reduce malnutrition or hidden hunger Micronutrient malnutrition is a continuing and serious public

health problem in many countries various Interventions to alleviate this problem have been implemented Biofortification the process of breeding nutrients into food crops provides a comparatively cost effective sustainable and long term means of delivering more micronutrients Legumes have higher protein content than most plant foods approximately twice than cereals and are rich in the key micronutrients folate niacin thiamine calcium iron and zinc This book summarizes the biofortification of legumes Detailed information through contributed chapters shed light on legumes research relevant to human health with key topics that include genomic and genetic resources for food security conventional and modern breeding approaches for improving nutrition agronomic traits and biotechnological interventions **Biotechnology of Biofertilizers S.**

Kannaiyan,2002 This volume is written with the objective of covering the basic issues in biological nitrogen fixation such as the physiology biochemistry and molecular genetics of nitrogen fixation and the role of signal molecules and host gene expression in nodulation and nitrogen fixation The book also details recent developments in biofertilizer technology such as the immobilization of cyanobacteria endophytic nitrogen fixation and solubilization and mobilization of nutrients by phosphobacteria and VA mycorrhiza and their role as bioinoculants **TEXTBOOK OF PHARMACOGNOSY AND**

PHYTOCHEMISTRY - I Miss. Shashikala Bhagat,Mr. Chandrabhan Sahu, Miss Dimpi Dewangan,Princy Kashyap, The Textbook of Pharmacognosy and Phytochemistry is the result of several writers attempts to incorporate the vast body of knowledge in both traditional and modern pharmacognosy which has long been a prerequisite for the curriculum of many universities worldwide In earlier times pharmacognosy was mainly understood as the study of medicines that come from natural sources According to the American Society of Pharmacognosy it is defined as the study of the physical chemical biochemical and biological characteristics of drugs or drug substances derived from nature along with the exploration of new natural sources for potential medicines Over time the field of pharmacognosy has evolved and expanded to include diverse information related to natural drugs such as their history classification use in alternative medicine physical form identification cultivation harvesting production and overall utilization It also involves trade and commercial use of medicinal and aromatic plants their impact on the economy detection of adulteration in natural drugs and evaluation through physical chemical and sensory methods Other important aspects include the biological testing of herbal medicines the study of biosynthetic pathways in plants pharmacognostic examination of crude drugs and processes such as extraction isolation and purification Additionally modern plant biotechnology plays a major role Altogether this vast and comprehensive knowledge base has led to the development of what is now known as modern pharmacognosy an interdisciplinary science that not only focuses on traditional areas but also includes phytochemical research and the study of biologically active plant compounds Keeping in mind the vast and detailed knowledge of the subject this textbook has been thoughtfully designed to make a meaningful contribution to the field of pharmacognosy This modern book on pharmacognosy and phytochemistry highlights plant biodiversity and covers various important topics which are mentioned on units The authors have successfully achieved

their goal through a systematic compilation of well written book supported by clear and neatly labeled diagrams wherever necessary They express heartfelt gratitude to their grandparents parents spouses and family members for their continuous motivation and support in creating a book that meets the long felt need of undergraduates postgraduates and researchers alike all in one place

Phyto and Rhizo Remediation Naveen Kumar Arora,Narendra Kumar,2019-11-15 The increasing human population and the associated activities have negatively influenced the ecosystems and life on earth The continuous addition of agrochemicals heavy metals and industrial wastes effluents in the ecosystems have caused great harm including loss of productivity biodiversity climate change and diseases in plants animals and humans resulting in increased marginal lands and endangered sustainability of life on earth Hence there is an urgent need to reverse the impact of dangerous pollutants through a holistic sustainable and biotic approach Bioremediation involves the utilization of biological systems mainly plants phytoremediation or microorganisms or both in combination rhizoremediation for the removal or degradation of pollutants and revive the habitats in an eco friendly manner Recently there have been many success stories related to bioremediation involving plants or plant microbe interactions These success stories are related to the removal of heavy metals pesticides polyaromatic hydrocarbons explosives radionuclides or reduction of biological oxygen demand total dissolved solids total suspended solids oil spills in water bodies Rhizoremediation has also been successfully used for reclamation of saline or marginal soils With the range of pollutants and the total area on earth covered by these toxic chemicals it is important that these eco friendly technologies be utilized in a better way The book throws light on the recent happenings research and success stories related to bioremediation of polluted habitats through phytoremediation or rhizoremediation The book also highlights some of the significantly important plant and microbial species involved in remediation the physiology biochemistry and the mechanisms of remediation by various plants and microbes and suggestions for future improvement of bioremediation technology
