Handbook of Image Processing and Computer Vision Arcangelo Distanto, Cosimo Distanto, 2020-06-08 Across three volumes the Handbook of Image Processing and Computer Vision presents a comprehensive review of the full range of topics that comprise the field of computer vision from the acquisition of signals and formation of images to learning techniques for scene understanding The authoritative insights presented within cover all aspects of the sensory subsystem required by an intelligent system to perceive the environment and act autonomously Volume 3 From Pattern to Object examines object recognition neural networks motion analysis and 3D reconstruction of a scene Topics and features Describes the fundamental processes in the field of artificial vision that enable the formation of digital images from light energy Covers light propagation color perception optical systems and the analog to digital conversion of the signal Discusses the information recorded in a digital image and the image processing algorithms that can improve the visual qualities of the image Reviews boundary extraction algorithms key linear and geometric transformations and techniques for image restoration Presents a selection of different image segmentation algorithms and of widely used algorithms for the automatic detection of points of interest Examines important algorithms for object recognition texture analysis 3D reconstruction motion analysis and camera calibration Provides an introduction to four significant types of neural network namely RBF SOM Hopfield and deep neural networks This all encompassing survey offers a complete reference for all students researchers and practitioners involved in developing intelligent machine vision systems The work is also an invaluable resource for professionals within the IT software and electronics industries involved in machine vision imaging and artificial intelligence Dr Cosimo Distanto is a Research Scientist in Computer Vision and Pattern Recognition in the Institute of Applied Sciences and Intelligent Systems ISAI at the Italian National Research Council CNR Dr Arcangelo Distanto is a researcher and the former Director of the Institute of Intelligent Systems for Automation ISSIA at the CNR His research interests are in the fields of Computer Vision Pattern Recognition Machine Learning and Neural Computation

Heart's Vortex Ares Pasipoularides, 2009-11 This outstanding resource provides a comprehensive guide to intracardiac blood flow phenomena and cardiac hemodynamics including the developmental history theoretical frameworks computational fluid dynamics and practical applications for clinical cardiology cardiac imaging and embryology It is not a mere compilation of the most up to date scientific data and relevant concepts Rather it is an integrated educational means to developing pluridisciplinary background knowledge and understanding Such understanding allows an appreciation of the crucial albeit heretofore generally unappreciated importance of intracardiac blood flow phenomena in a host of multifaceted functional and morphogenetic cardiac adaptations The book includes over 400 figures which were prepared by the author and form a vital part of the pedagogy It is organized in three parts Part I Fundamentals of Intracardiac Flows and Their Measurement provides comprehensive background from many disciplines that are necessary for a deep and broad understanding and appreciation of intracardiac blood flow phenomena Such

indispensable background spans several chapters and covers necessary mathematics a brief history of the evolution of ideas and methodological approaches that are relevant to cardiac fluid dynamics and imaging a qualitative introduction to fluid dynamic stability theory chapters on physics and fluid dynamics of unsteady blood flows and an intuitive introduction to various kinds of relevant vortical fluid motions Part II Visualization of Intracardiac Blood Flows Methodologies Frameworks and Insights is devoted to pluridisciplinary approaches to the visualization of intracardiac blood flows It encompasses chapters on 3 D real time and live 3 D echocardiography and Doppler echocardiography CT tomographic scanning modalities including multidetector spiral helical dataset acquisitions MRI and cardiac MRA including phase contrast velocity mapping PCVM etc An entire chapter is devoted to the understanding of post processing exploration techniques and the display of tomographic data including slice and dice 3 D techniques and cine MRI Part II also encompasses an intuitive introduction to CFD as it pertains to intracardiac blood flow simulations followed in separate chapters by conceptually rich treatments of the computational fluid dynamics of ejection and of diastolic filling An entire chapter is devoted to fluid dynamic epigenetic factors in cardiogenesis and pre and postnatal cardiac remodeling and another to clinical and basic science perspectives and their implications for emerging research frontiers Part III contains an Appendix presenting technical aspects of the method of predetermined boundary motion PBM developed at Duke University by the author and his collaborators
