Fire Debris Analysis Eric Stauffer, Julia A. Dolan, Reta Newman, 2007-12-10 The study of fire debris analysis is

vital to the function of all fire investigations and as such Fire Debris Analysis is an essential resource for fire investigators. The present methods of analysis include the use of gas chromatography and gas chromatography mass spectrometry techniques which are well established and used by crime laboratories throughout the world. However, despite their universality, this is the first comprehensive resource that addresses their application to fire debris analysis. Fire Debris Analysis covers topics such as the physics and chemistry of fire and liquid fuels, the interpretation of data obtained from fire debris, and the future of the subject. Its cutting edge material and experienced author team distinguishes this book as a quality reference that should be on the shelves of all crime laboratories. Serves as a comprehensive guide to the science of fire debris analysis. Presents both basic and advanced concepts in an easily readable logical sequence. Includes a full color insert with figures that illustrate key concepts discussed in the text.

Medicinal Chemistry and Drug Design Deniz Ekinci, 2012-05-16 Over the recent years medicinal chemistry has become responsible for explaining interactions of chemical molecules, processes such that many scientists in the life sciences from agronomy to medicine are engaged in medicinal research. This book contains an overview focusing on the research area of enzyme inhibitors, molecular aspects of drug metabolism, organic synthesis, prodrug synthesis, in silico studies, and chemical compounds used in relevant approaches. The book deals with basic issues and some of the recent developments in medicinal chemistry and drug design. Particular emphasis is devoted to both theoretical and experimental aspects of modern drug design. The primary target audience for the book includes students, researchers, biologists, chemists, chemical engineers, and professionals who are interested in associated areas. The textbook is written by international scientists with expertise in chemistry, protein, biochemistry, enzymology, molecular biology, and genetics, many of which are active in biochemical and biomedical research.
