Iq Questions With Answers For Kids:

Making Kids Cleverer David Didau,2018-12-20 In *Making Kids Cleverer* A manifesto for closing the advantage gap David Didau reignites the nature vs nurture debate around intelligence and offers research informed guidance on how teachers can help their students acquire a robust store of knowledge and skills that is both powerful and useful Foreword by Paul A Kirschner Given the choice who wouldn t want to be cleverer What teacher wouldn t want this for their students and what parent wouldn t wish it for their children When David started researching this book he thought the answers to the above were obvious But it turns out that the very idea of measuring and increasing children s intelligence makes many people extremely uncomfortable If some people were more intelligent where would that leave those of us who weren t The question of whether or not we can get cleverer is a crucial one If you believe that intelligence is hereditary and environmental effects are trivial you may be sceptical But environment does matter and it matters most for children from the most socially disadvantaged backgrounds those who not only have the most to gain but who are also the ones most likely to gain from our efforts to make all kids cleverer And one thing we can be fairly sure will raise children s intelligence is sending them to school In this wide ranging enquiry into psychology sociology philosophy and cognitive science David argues that with greater access to culturally accumulated information taught explicitly within a knowledge rich curriculum children are more likely to become cleverer to think more critically and subsequently to live happier healthier and more secure lives Furthermore by sharing valuable insights into what children truly need to learn during their formative school years he sets out the numerous practical ways in which policy makers and school leaders can make better choices about organising schools and how teachers can communicate the knowledge that will make the most difference to young people as effectively and efficiently as possible David underpins his discussion with an exploration of the evolutionary basis for learning and also untangles the forms of practice teachers should be engaging their students in to ensure that they are acquiring expertise not just consolidating mistakes and misconceptions There are so many competing suggestions as to how we should improve education that knowing how to act can seem an impossible challenge Once you have absorbed the arguments in this book however David hopes you will find the simple question that he asks himself whenever he encounters new ideas and initiatives Will this make children cleverer as useful as he does Suitable for teachers school leaders policy makers and anyone involved in education
