

INTRODUCTION

GENERAL

This section has the description and the repair procedures for the engine and the fuel system. Removal, disassembly, cleaning, assembly, installation, specifications and troubleshooting procedures are included.

DESCRIPTION

The Isuzu 4JG2 diesel engine is a four-cylinder engine with a displacement of 3059 cm³ (186.7 in³). The firing order is 1-3-4-2. The No. 1 cylinder is toward the end of the engine with the fan. The serial number of the engine is on the side of the cylinder block near the No. 4 cylinder location.

This diesel engine has direct fuel injection. Diesel fuel is injected into the cylinder at the end of the compression stroke of the piston. A glow plug is also installed in the cylinder head for each cylinder. These glow plugs are cold start aids to make the diesel engine easier to start when the engine is cold.

The fuel injection pump has one plunger assembly that supplies fuel to the four fuel injectors. A mechanical governor controls the maximum engine speed. The operation of this governor is described in the Fuel System later in this section.

The crankshaft has five main bearings. The main bearing in the center of the crankshaft is also the thrust bearing and has thrust washers (thrust bearings) on each side of the main bearing. The bearing journals have had a special process called "tufftrided" and can not be repaired by grinding.

The pistons have three piston rings. Each of the two compression rings have a special shape designed for its position on the piston. The third piston ring is the oil control ring. The cylinder liners are chrome plated.

The valves, valve guides, and valves seats can be replaced during engine repairs.
