Can a constructor be made final?

No, this is not possible.

static members belong to a class, but the constructor is needed to create an object. An abstract class is a partially implemented class, which contains abstract methods to be implemented in child class. final restricts modification: variables become constant, methods can't be overridden, and classes can't be inherited.

No, constructors are similar to methods, but cannot be invoked directly by a method call. They are used to initialize new class instances. Like methods, they may be overloaded

What do you know about java?

Java is a high-level programming language originally developed by Sun Microsystems and released in 1995. Java runs on a variety of platforms, such as Windows, Mac OS, and the various versions of UNIX.

Some of the advantages of the Java:

- The code is compiled into bytecode, it is like code once and run anywhere. It eliminates the need for platform-specific versions.
- Unlike other languages, the code is very robust.
- Object-oriented language.
- The applets runs faster
- Compared to C++, Java is easy to learn.

Java is a portable language which supports object-oriented features like inheritance, polymorphism and encapsulation and it is platform-independent once compiled and run anywhere with the help of JVM. In JVM, we have native stack which is used to store non-Java code and it helps the programmer to convert it to Java code.
