Handbook of Thermal Management Systems Fethi Aloui,Edwin Geo Varuvel,Ankit Sonthalia,2023-08-24 Handbook of Thermal Management Systems e Mobility and Other Energy Applications is a

comprehensive reference on the thermal management of key renewable energy sources and other electronic components. With an emphasis on practical applications, the book addresses thermal management systems of batteries, fuel cells, solar panels, electric motors, as well as a range of other electronic devices that are crucial for the development of sustainable transport systems. Chapters provide a basic understanding of the thermodynamics behind the development of a thermal management system. Updates on Batteries, Fuel Cells, Solar Panels, and Other Electronics provide a detailed description of components and discuss fundamentals. Dedicated chapters then systematically examine the heating, cooling, and phase changes of each system, supported by numerical analyses, simulations, and experimental data. These chapters include discussion of the latest technologies and methods and practical guidance on their application in real-world system-level projects, as well as case studies from engineering systems that are currently in operation. Finally, next-generation technologies and methods are discussed and considered. Presents a comprehensive overview of thermal management systems for modern electronic technologies related to energy production, storage, and sustainable transportation. Addresses the main bottlenecks in the technology development for future green and sustainable transportation systems. Focuses on the practical aspects and implementation of thermal management systems through industrial case studies, real-world examples, and solutions to key problems.

Alternative Sources of Energy Modeling and Automation George S. Stavrakakis, 2020-03-06. Micro power domestic organic Rankine cycle (ORC) systems and the selection of the expander and the working fluid are presented, analyzed thoroughly, and numerically evaluated. A promising decentralized hybrid PV/SOFC system is investigated for providing useful energy supply to commercial buildings capable of power and heat generation at a lower cost. A hybrid solar combined cycle power plant integrated with a packed bed thermal energy storage system with a novel recycling configuration enables robust control of collector temperature and net power during times of high solar activity. An automated hybrid solar and biomass power plant for thermal energy production for indoor space heating loads coverage is presented. A comprehensive and up-to-date literature review is presented of non-iterative methods for the extraction of the single diode model parameters of photovoltaic modules. A prototype custom-built two-speed gearbox with a single-stage transmission electric vehicle achieves significant reductions in the overall energy consumption. Two new fuzzy models are presented of high-concentrator photovoltaics using the high-accuracy Takagi-Sugeno-Kang approach and the ease of interpreting the Mamdani linguistic rules. Finally, the impact of plug-in hybrid electric vehicles (PHEVs) in the primary frequency regulation is studied, and the effects of PHEVs in non-interconnected isolated power systems with significant renewable energy source (RES) penetration are demonstrated through simulations of the isolated power system of Cyprus Island.
