Dispersing the Clouds of Temptation Brian Lightbody, 2015-04-21 In Romans 7 14 25 Paul declares For I do not do the good I want but the evil I do not want is what I do KJV St Paul s statement is a universal truth for all human beings humans whether Christians Jews Muslims Buddhists Hindus or atheists are prone to committing free actions that are not good Furthermore and irrespective of how we might construe the notion of good whether as acting in accordance with some religious or spiritual precept or simply doing what is in one s best interest we often knowingly and freely choose actions that may or in fact do harm us There is a name given to such actions We call them weak willed Weakness of will or akrasia has perplexed philosophers theologians and laypersons alike for centuries This book reveals why the idea has caused so much bafflement and consternation for so many The main thrust of the work however is to illuminate and inspire Lightbody seeks to demonstrate concretely how and why we are weak willed By extracting an alchemical touchstone from Plato s middle period philosophy Lightbody in addition reveals how we may transmute harmful appetites into life edifying passions

Hijacked Brains Henrietta Robin Barnes, MD, 2015-01-06 This book written from the perspective of a practicing primary care physician interweaves patients stories with fascinating new brain research to show how addictive drugs overtake basic brain functions and transform them to create a chronic illness that is very difficult to treat The idea that drug and alcohol addiction are chronic illnesses and not character flaws is not news this notion has been around for many years What Hijacked Brains offers

is context and personal stories that demonstrate this point in a very accessible package Dr Barnes explores how the healthy brain works how addictive drugs flood basic reward pathways and what it feels like to grapple with addiction She discusses how for individuals the combination of genetic and environmental factors determines both vulnerability for addiction and the resilience necessary for recovery Finally she shows how American culture with its emphasis on freewill and individualism tends to blame the addict for bad choices and personal weakness thereby impeding political and or health related efforts to get the addict what she needs to recover

Molecular Neurobiology of Addiction Recovery Kenneth Blum,John Femino,Scott Teitelbaum,John Giordano,Marlene Oscar-Berman,Mark Gold,2013-05-27 Humans are biologically programmed to seek out pleasurable experiences These experiences are processed in the mesolimbic system also referred to as the reward center of the brain where a number of chemical messengers work in concert to provide a net release of dopamine in the Nucleus Accumbens In some genetically predisposed individuals addiction occurs when the mechanisms of the mesolimbic system are disrupted by the use of various drugs of abuse Since Alcoholics Anonymous was founded in 1935 its 12 step program of spiritual and character development has helped countless alcoholics and drug addicts curb their self destructive behaviors However the program was developed at a time when comparatively little was known about the function of the brain and it has never been studied scientifically This is the first book to take a systematic look at the molecular neurobiology associated with each of the 12 steps and to review the significant body of addiction research literature that is pertinent to the program
