Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred to as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo code and suitable for use in real world large scale data mining projects. Addresses advanced topics such as mining object relational databases, spatial databases, multimedia databases, time series databases, text databases, the World Wide Web, and applications in several fields. Provides a comprehensive practical look at the concepts and techniques you need to get the most out of your data. *Data Mining* Jiawei Han, Micheline Kamber, 2001 *Data Mining: Concepts And Techniques, 2E* Jiawei Han, Micheline Kamber, 2010-01-01

Chronicles: Formalization of a Temporal Model Thomas Guyet,Philippe Besnard,2023-07-25 This book is intended as an introduction to a versatile model for temporal data It exhibits an original lattice structure on the space of chronicles and proposes new counting approach for multiple occurrences of chronicle occurrences This book also proposes a new approach for frequent temporal pattern mining using pattern structures This book was initiated by the work of Ch Dousson in the 1990 s At that time the prominent format was Temporal Constraint Networks for which the article by Richter Meiri and Pearl is seminal Chronicles do not conflict with temporal constraint networks they are closely related Not only do they share a similar graphical representation they also have in common a notion of constraints in the timed succession of events However chronicles are definitely oriented towards fairly specific tasks in handling temporal data by making explicit certain aspects of temporal data such as repetitions of an event The notion of chronicle has been applied both for situation recognition and temporal sequence abstraction The first challenge benefits from the simple but expressive formalism to specify temporal

behavior to match in a temporal sequence The second challenge aims to abstract a collection of sequences by chronicles with the objective to extract characteristic behaviors This book targets researchers and students in computer science from logic to data science Engineers who would like to develop algorithms based on temporal models will also find this book useful
