Mahafza, Scott C. Winton, Atef Z. Elsherbeni, 2021-08-16 This new handbook on radar signal analysis adopts a deliberate and systematic approach It uses a clear and consistent level of delivery while maintaining strong and easy to follow mathematical details The emphasis of this book is on radar signal types and their relevant signal processing and not on radar systems hardware or components This handbook serves as a valuable reference to a wide range of audience More specifically college level students practicing radar engineers as well as casual readers of the subject are the intended target audience of the first few chapters of this book As the book chapters progress these grow in complexity and specificity Accordingly later chapters are intended for practicing engineers graduate college students and advanced readers Finally the last few chapters contain several special topics on radar systems that are both educational and scientifically entertaining to all readers The presentation of topics in this handbook takes the reader on a scientific journey whose major landmarks comprise the different radar subsystems and components In this context the chapters follow the radar signal along this journey from its birth to the end of its life Along the way the different relevant radar subsystems are analyzed and discussed in great detail The chapter contributors of this new handbook comprise experienced academia members and practicing radar engineers Their combined years of academic and real world experiences are in excess of 175 Together they bring a unique easy to follow mix of mathematical and practical presentations of the topics discussed in this book See the Chapter Contributors section to learn more about these individuals [Understanding Digital Signal Processing with MATLAB® and Solutions](#) Alexander D. Poularikas, 2017-11-13 The book discusses receiving signals that most electrical engineers detect and study The vast majority of signals could never be detected due to random additive signals known as noise that distorts them or completely overshadows them Such examples include an audio signal of the pilot communicating with the ground over the engine noise or a bioengineer listening for a fetus heartbeat over the mother's The text presents the methods for extracting the desired signals from the noise Each new development includes examples and exercises that use MATLAB to provide the answer in graphic forms for the reader's comprehension and understanding *A Reliability-Aware Fusion Concept Toward Robust Ego-Lane Estimation Incorporating Multiple Sources* Tuan Tran Nguyen, 2019-06-14 To tackle the challenges of the road estimation task many works employ a fusion of multiple sources By that a commonly made assumption is that the sources always are equally reliable However this assumption is inappropriate since each source has certain advantages and drawbacks depending on the operational scenarios Therefore Tuan Tran Nguyen proposes a novel concept by incorporating reliabilities into the multi source fusion so that the road estimation task can alternately select only the most reliable sources Thereby the author estimates the reliability for each source online using classifiers trained with the

sensor measurements the past performance and the context Using real data recordings he shows via experimental results that the presented reliability aware fusion increases the availability of automated driving up to 7 percentage points compared to the average fusion About the Author Tuan Tran Nguyen received the Master s degree in computer science and the Ph D degree from Otto von Guericke University Magdeburg Germany in 2013 and 2019 respectively His research focuses on methods and architectures for reliability based sensor fusion in intelligent vehicles

American Book Publishing Record, 1999 Data Fusion: Concepts and Ideas H B Mitchell, 2012-02-13 This textbook provides a comprehensive introduction to the concepts and idea of multisensor data fusion It is an extensively revised second edition of the author's successful book Multi Sensor Data Fusion An Introduction which was originally published by Springer Verlag in 2007 The main changes in the new book are New Material Apart from one new chapter there are approximately 30 new sections 50 new examples and 100 new references At the same time material which is out of date has been eliminated and the remaining text has been rewritten for added clarity Altogether the new book is nearly 70 pages longer than the original book Matlab code Where appropriate we have given details of Matlab code which may be downloaded from the worldwide web In a few places where such code is not readily available we have included Matlab code in the body of the text Layout The layout and typography has been revised Examples and Matlab code now appear on a gray background for easy identification and advanced material is marked with an asterisk The book is intended to be self contained No previous knowledge of multi sensor data fusion is assumed although some familiarity with the basic tools of linear algebra calculus and simple probability is recommended Although conceptually simple the study of multi sensor data fusion presents challenges that are unique within the education of the electrical engineer or computer scientist To become competent in the field the student must become familiar with tools taken from a wide range of diverse subjects including neural networks signal processing statistical estimation tracking algorithms computer vision and control theory All too often the student views multi sensor data fusion as a miscellaneous assortment of different processes which bear no relationship to each other In contrast in this book the processes are unified by using a common statistical framework As a consequence the underlying pattern of relationships that exists between the different methodologies is made evident The book is illustrated with many real life examples taken from a diverse range of applications and contains an extensive list of modern references **Multi-Sensor Data Fusion** H.B. Mitchell, 2007-07-13 The purpose of this book is to provide an introduction to the theories and techniques of multi sensor data fusion The book has been designed as a text for a one semester graduate course in multi sensor data fusion It should also be useful to advanced undergraduates in electrical engineering or computer science who are studying data fusion for the first time and to practising engineers who wish to apply the concepts of data fusion to practical applications

The book is intended to be largely self contained in so far as the subject of multi sensor data fusion is concerned although some prior exposure to the subject may be helpful to the reader A clear understanding of multi sensor data fusion can only be achieved with the use of a certain minimum level of mathematics It is therefore assumed that the reader has a reasonable working knowledge of the basic tools of linear algebra calculus and simple probability theory More specific results and techniques which are required are explained in the body of the book or in appendices which are appended to the end of the book
