Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.

A Compendium of Neuropsychological Tests Esther Strauss, Elisabeth M. S. Sherman, Otfried Spreen, 2006. It is also a source of critical reviews of major neuropsychological assessment tools for the use of the practicing clinician.

Regression-Based Normative Data for Psychological Assessment Wim Van der Elst, 2024-06-03. Over the last 20 years, so-called regression-based normative methods have become increasingly popular. In this approach, regression models for the mean and the residual variance structure are used to derive the normative data. The regression-based normative approach has some important advantages over the traditional normative approach, e.g., it allows for deriving more fine-grained norms and typically requires a substantially smaller sample size to derive accurate norms. This book focuses on regression-based methods to derive normative data. The target audience are psychologists and other researchers in the behavioral sciences who are interested in deriving normative data for psychological tests, e.g., cognitive tests, questionnaires, rating scales, etc. The book provides the essential theoretical background that is needed to understand the methodology, with a strong emphasis on the practical, real-life application of the methodology. To this end, the book is also accompanied by an open-source software package, the R library NormData, that is used to exemplify how normative data can be derived in several case studies.

Handbook of Cross-Cultural Neuropsychology Elaine Fletcher-Janzen, Tony L. Strickland, Cecil R. Reynolds, 2013-11-11. Historically, relatively few investigations in neuropsychology have been sensitive to the analysis of cultural variables. This handbook will assist the neuropsychologist interested in cultural competence and help increase understanding of the link between cultural competence in assessment and intervention and good treatment outcomes. The handbook authors provide an in-depth discussion of the current status of multicultural training in neuropsychology, specific information on diverse groups (age, gender, ethnicity, etc.), assessment instruments, and clinical populations (HIV-infected, seizure disorders, brain injuries, and unique analysis of immigration patterns, forensics, and psychopharmacology). This volume is the first to summarize the cultural data available in neuropsychology. A valuable resource.
