Acoustic Profiles Randolph Jordan, 2023 In *Acoustic Profiles* author Randolph Jordan proposes a new model for image sound analysis that incorporates the vocabulary and methods of environmental studies specifically exploring the potential of a model based on acoustic ecology Jordan uses close readings of films to connect the diverse fields of architecture environmental studies art history the history of modernity and media studies through the tenets of acoustic ecology In relating ways of thinking about sound from acoustic ecology to film studies and vice versa *Acoustic Profiles* takes an interdisciplinary approach to inspire readers to experience cinematic art as a motivator of greater environmental purposes and to understand the role of the media in achieving those purposes The book's method is referred to as acoustic profiling a theoretical tool for hearing how filmmakers articulate spatial dimensions in their works To that end the book demonstrates how the creative use of media technologies in different fields can be understood relationally through the ecological issues that connect them revivifying acoustic ecology for media studies while broadening the latter's ecological scope The book provides a tool kit for readers to hear films with new ears to think critically about this new listening practice and to extend that engagement beyond the walls of the screening room by opening works of audiovisual media up to the consideration of soundscape research

Auditory Archaeology Steve Mills, 2016-06-16 Auditory archaeology considers the potential contribution of everyday mundane and unintentional sounds in the past and how these may have been significant to people Steve Mills explores ways of examining evidence to identify intentionality with respect to the use of sound drawing on perception psychology as well as soundscape and landscape studies of various kinds His methodology provides a flexible and widely applicable set of elements that can be adapted for use in a broad range of archaeological and heritage contexts The outputs of this research form the case studies of the Teleorman River Valley in Romania atalhyk in Turkey and West Penwith a historical site in the UK This fascinating volume will help archaeologists and others studying human sensory experiences in the past and present

Diminished Faculties Jonathan Sterne, 2021-10-25 In *Diminished Faculties* Jonathan Sterne offers a sweeping cultural study and theorization of impairment Drawing on his personal history with thyroid cancer and a paralyzed vocal cord Sterne undertakes a political phenomenology of impairment in which experience is understood from the standpoint of a subject that is not fully able to account for itself He conceives of impairment as a fundamental dimension of human experience examining it as both political and physical While some impairments are enshrined as normal in international standards others are treated as causes or effects of illness or disability Alongside his fractured account of experience Sterne provides a tour of alternative vocal technologies and practices a study of normal hearing loss as a cultural

practice rather than a medical problem and an intertwined history and phenomenology of fatigue that follows the concept as it careens from people to materials science to industrial management to spoons Sterne demonstrates how impairment is a problem opportunity and occasion for approaching larger questions about disability subjectivity power technology and experience in new ways Diminished Faculties ends with a practical user s guide to impairment theory

The Routledge Companion to the Sound of Space Emma-Kate Matthews,Jane Burry,Mark Burry,2024-11-11 This companion explores a range of conceptual and practical relationships between sound and space across various disciplines providing insights from technical creative cultural political philosophical psychological and physiological perspectives The content spans a wide range of spatial typologies from large reverberant buildings to modest and intimate ones from external public squares to domestic interiors and from naturally formed environments to highly engineered spaces These compiled insights and observations explore the vast diversity of ways in which sonic and spatial realms interact This publication therefore forms important bridges between the intricate and diverse topics of technology philosophy composition performance and spatial design to contemplate the potential of sound and space as tools for creative expression and communication as well as for technical innovation It is hoped that by sharing these insights this book will inspire practitioners scholars and enthusiasts to incorporate new perspectives and methodologies into their own work Through a rich blend of theory practice and critical reflection this volume serves as a valuable resource for anyone interested in exploring the intricacy of relationships between space and sound whether they are students professionals or simply curious Our companion provides a cross section through shared territories between sonic and spatial disciplines from architecture engineering sound design music composition and performance urban design product design and much more
