Igneous and Metamorphic Petrology Myron G. Best, 2002-12-13 Igneous and metamorphic petrology has over the last twenty years expanded rapidly into a broad multifaceted and increasingly quantitative science. Advances in geochemistry, geochronology, and geophysics, as well as the appearance of new analytical tools, have all contributed to new ways of thinking about the origin and evolution of magmas and the processes driving metamorphism. This book is designed to give students a balanced and comprehensive coverage of these new advances as well as a firm grounding in the classical aspects of igneous and metamorphic petrology. The emphasis throughout is on the processes controlling petrogenesis, but care is taken to present the important descriptive information so crucial to interpretation. One of the most up-to-date syntheses of igneous and metamorphic petrology available. Emphasis throughout on latest experimental and field data. Igneous and metamorphic sections can be used independently if necessary. **Applied Geophysics** W. M. Telford, L. P. Geldart, R. E.

Sheriff, 1990-10-26 This is the completely revised and updated version of the popular and highly regarded textbook *Applied Geophysics*. It describes the physical methods involved in exploration for hydrocarbons and minerals, which include gravity, magnetic, seismic, electrical, electromagnetic, radioactivity, and well logging methods. All aspects of these methods are described, including basic theory, field equipment, techniques of data acquisition, data processing, and interpretation, with the objective of locating commercial deposits of minerals, oil, and gas and determining their extent. In the fourteen years or so since the first edition of *Applied Geophysics*, many changes have taken place in this field, mainly as the result of new techniques, better instrumentation, and increased use of computers in the field and in the interpretation of data. The authors describe these changes in considerable detail, including improved methods of solving the inverse problem, specialized seismic methods, magnetotellurics as a practical exploration method, time domain electromagnetic methods, increased use of gamma ray spectrometers, and improved well logging methods and interpretation. *Cities for the New Millennium* Marcial

Echenique, Andrew Saint, 2014-04-04 *Cities for the New Millennium* is the outcome of a joint conference held in Salford in July 2000 by the Royal Institute of British Architects and the University of Cambridge's Department of Architecture. Professionals, architects, engineers, and developers, as well as academics, from

different countries and disciplines here lavish their expertise on issues of transportation density land use risk and energy saving others present urban scale buildings or landscapes that have been judged inspirational or inventive This book therefore is not just about theories of urbanism It reveals how co operation and debate between different parties and professions can illuminate the creative kind of urban development we should be aiming for
