The Highway Capacity Manual: A Conceptual and Research History Volume 2 Elena S. Prassas, Roger P.

Roess, 2020-01-08 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used around the globe and has inspired the development of similar manuals in other countries This book is Volume II of a series on the conceptual and research origins of the methodologies found in the Highway Capacity Manual It focuses on the most complex points in a traffic system signalized and unsignalized intersections and the concepts and methodologies developed over the years to model their operations It also includes an overview of the fundamental concepts of capacity and level of service particularly as applied to intersections The historical roots of the manual and its contents are important to understanding current methodologies and improving them in the future As such this book is a valuable resource for current and future users of the Highway Capacity Manual as well as researchers and developers involved in advancing the state of the art in the field

The Highway Capacity Manual: A Conceptual and Research History Roger . P Roess, Elena . S Prassas, 2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used abroad and has spurred the development of similar manuals in other countries The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios The manual also addresses related pedestrian bicycle and transit issues This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types The book is comprised of two volumes Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come

Fambro, 1996 **Safety and Level of Service** Nicholas J. Garber, John S. Ponder, 1996 A number of methodologies have been employed to determine the operational performance or level of service of

unsignalized intersections The latest methodology embraced by the 1994 Highway Capacity Manual uses an average total delay measure as the determinant of level of service This study compared field measures of delay to the values generated by the 1994 Highway Capacity Software to determine whether the new methodologies produced acceptable results for delay and level of service for two way and all way stop controlled unsignalized intersections The relation of safety characteristics to operational performance levels at unsignalized intersections was also investigated The objective was to create a relationship between accident rate and average total delay that determines the safety of the unsignalized intersection Other variables were introduced identified and incorporated with delay into a predictive model for both two way and all way stop controlled unsignalized intersections The findings of this study supported the statement that the unsignalized intersection module of the 1994 Highway Capacity Manual produced results comparable to manual field calculations Although there was some slight difference between the two delays with regard to specific numbers the values measured in the field fell within the correct ranges of level of service as determined by the two way and all way stop controlled intersection 1994 Highway Capacity Manual methodologies A relationship between safety and level of service was also determined For the range of variables used this model provided a basic framework for evaluating safety conditions based on the level of service and other selected characteristics at two way stop controlled unsignalized intersections
