Ever since television became practical in the early 1950s, closed-circuit television (CCTV) in conjunction with the light microscope has provided large screen display, raised image contrast and made the images formed by ultraviolet and infrared rays visible. With the introduction of large scale integrated circuits in the last decade, TV equipment has improved by leaps and bounds as has its application in microscopy. With modern CCTV, sometimes with the help of digital computers, we can distill the image from a scene that appears to be nothing but noise, capture fluorescence too dim to be seen, visualize structures far below the limit of resolution, crisp images hidden in fog, measure, count and sort objects and record in time lapsed and high speed sequences through the light microscope without great difficulty. In fact, video is becoming indispensable for harnessing the fullest capacity of the light microscope, a capacity that itself is much greater than could have been envisioned just a few years ago. The time seemed ripe then to review the basics of video and of microscopy and to examine how the two could best be combined to accomplish these tasks. The Marine Biological Laboratory short courses on Analytical and Quantitative Light Microscopy in Biology, Medicine and the Materials Sciences and the many inquiries I received on video microscopy supported such an effort and Kirk Jensen of Plenum Press persuaded me of its worth.

Proceedings of the Symposium on Diagnostic Techniques for Semiconductor Materials and Devices Dieter K. Schroder, Janet L. Benton, P. Rai-Choudhury, 1994. **ERDA Energy Research Abstracts** United States. Energy Research and Development Administration, 1976-05. **Characterization of Nanomaterials in Complex Environmental and Biological Media**, 2015-06-01. Characterization of Nanomaterials in Complex Environmental and Biological Media covers the novel properties of nanomaterials and their applications to consumer products and industrial processes. The book fills the growing gap in this challenging area, bringing together disparate strands in chemistry, physics, biology and other relevant disciplines. It provides an overview on nanotechnology, nanomaterials, nano-eco-toxicology and nanomaterial characterization, focusing on the characterization of a range of nanomaterial physicochemical properties of relevance to environmental and toxicological studies and their available analytical techniques. Readers will find a multidisciplinary approach that provides highly skilled scientists, engineers and technicians with the tools they need to understand and interpret complicated sets of data obtained through sophisticated analytical techniques. Addresses the requirements, challenges and solutions for nanomaterial characterization in environmentally complex media. Focuses on technique limitations, appropriate data collection, data interpretation and analysis. Aids in understanding and comparing nanomaterial characterization data reported in the literature using different analytical tools. Includes case studies of characterization relevant complex media to enhance
