Open Source Systems Security Certification Ernesto Damiani, Claudio Agostino Ardagna, Nabil El Ioini, 2008-10-21. Open Source Systems Security Certification discusses Security Certification Standards and establishes the need to certify open source tools and applications. This includes the international standard for the certification of IT products, software, firmware, and hardware. Common Criteria ISO/IEC 15408:2006, a certification officially adopted by the governments of 18 nations. Operating System Security Trent Jaeger, 2022-05-31 Operating systems provide the fundamental mechanisms for securing computer processing Since the 1960s operating systems designers have

explored how to build secure operating systems operating systems whose mechanisms protect the system against a motivated adversary Recently the importance of ensuring such security has become a mainstream issue for all operating systems In this book we examine past research that outlines the requirements for a secure operating system and research that implements example systems that aim for such requirements For system designs that aimed to satisfy these requirements we see that the complexity of software systems often results in implementation challenges that we are still exploring to this day However if a system design does not aim for achieving the secure operating system requirements then its security features fail to protect the system in a myriad of ways We also study systems that have been retrofit with secure operating system features after an initial deployment In all cases the conflict between function on one hand and security on the other leads to difficult choices and the potential for unwise compromises From this book we hope that systems designers and implementors will learn the requirements for operating systems that effectively enforce security and will better understand how to manage the balance between function and security
