

Levels and competencies assessment

Here are my thoughts on the expectations and competencies for the past period.

- **Overall:** I feel I've made strong progress towards exceeding what is expected at my level. I'll be curious to hear observations and feedback on where I am.
- **Software engineering:** I focused a lot on this area.
- **Collaboration:** I worked a lot with people from other teams: data science (John), Payback (Zeno) and Chat (Emily and Tom). I've also been involved with architecture discussions with 3 other teams.
- **Design and architecture:** I really focused on this area for the period, expanding my involvement from beyond the team. The multiple, significant RFC contributions are a good example of this.
- **Results and impact:** I've been prioritizing business results, and the impact shows. All key projects were shipped on time or before. I achieved this by putting other priorities later: such as some of my citizenship commitments, or delaying my public speaking engagement.
- **Citizenship:** I spent a lot of time mentoring and onboarding others. I did not put additional focus on this area, external to the company, though.

A Concise Introduction to Software Engineering Pankaj Jalote, 2008-10-17 An introductory course on Software Engineering remains one of the hardest subjects to teach largely because of the wide range of topics the area encompasses I have believed for some time that we often tend to teach too many concepts and topics in an introductory course resulting in shallow knowledge and little insight on application of these concepts And Software Engineering is really about application of concepts to efficiently engineer good software solutions Goals I believe that an introductory course on Software Engineering should focus on imparting to students the knowledge and skills that are needed to successfully execute a commercial project of a few person months effort while employing proper practices and techniques It is worth pointing out that a vast majority of the projects executed in the industry today fall in this scope executed by a small team over a few months I also believe that by carefully selecting the concepts and topics we can in the course of a semester achieve this This is the motivation of this book The goal of this book is to introduce to the students a limited number of concepts and practices which will achieve the following two objectives Teach the student the skills needed to execute a smallish commercial project

Object-Oriented Technology. ECOOP '98 Workshop Reader Serge Demeyer,Jan Bosch,1998-12-11 At the time of writing mid October 1998 we can look back at what has been a very successful ECOOP 98 Despite the time of the year in the middle of what is traditionally regarded as a holiday period ECOOP 98 was a record breaker in terms of number of participants Over 700 persons found their way to the campus of the Brussels Free University to participate in a wide range of activities This 3rd ECOOP workshop reader reports on many of these activities It contains a careful selection of the input and a cautious summary of the outcome for the numerous discussions that happened during the workshops demonstrations and

posters As such this book serves as an excellent snapshot of the state of the art in the field of object oriented programming About the diversity of the submissions A workshop reader is by its very nature quite diverse in the topics covered as well as in the form of its contributions This reader is not an exception to this rule as editors we have given the respective organizers much freedom in their choice of presentation because we feel form follows content This explains the diversity in the types of reports as well as in their lay out
