sections the first and third reflect the fact that there are two types of equipment required in the plant one in which the actual product is synthesized or processed such as the fermentor centrifuge and chromatographic columns and the other that supplies support for the facility or process including air conditioning water and waste systems Part two describes such components as pumps filters and valves not limited to a certain type of equipment Lastly it covers planning and designing the entire facility along with requirements for containment and validation of the process

Chemical and Bioprocess Engineering Ricardo Simpson, Sudhir K. Sastry, 2013-12-04 The goal of this textbook is to provide first year engineering students with a firm grounding in the fundamentals of chemical and bioprocess engineering However instead of being a general overview of the two topics Fundamentals of Chemical and Bioprocess Engineering will identify and focus on specific areas in which attaining a solid competency is desired This strategy is the direct result of studies showing that broad based courses at the freshman level often leave students grappling with a lot of material which results in a low rate of retention Specifically strong emphasis will be placed on the topic of material balances with the intent that students exiting a course based upon this textbook will be significantly higher on Bloom s Taxonomy knowledge comprehension application analysis and synthesis evaluation creation relating to material balances In addition this book also provides students with a highly developed ability to analyze problems from the material balances perspective which leaves them with important skills for the future The textbook consists of numerous exercises and their solutions Problems are classified by their level of difficulty Each chapter has references and selected web pages to vividly illustrate each example In addition to engage students and increase their comprehension and rate of retention many examples involve real world situations
