Introducing the Effective Mass of Activated Complex and the Discussion on the Wave Function of this Instanton Petr Ptáček, Tomáš Opravil, František Šoukal, 2018-07-18. Heterogeneous kinetics plays an important role in many scientific disciplines and industrial branches such as physical chemistry, materials science, chemical industry, ceramic industry, etc. Although many excellent books on theories and methods can be found, the aim of this book is to provide an unconventional insight into the heterogeneous kinetics and properties of the activated complex. The introduction of the effective mass of this instanton enables to calculate many other properties such as the most probable speed of activated complex, the momentum, the energetic density, the mass flux, etc., and to define two quantum numbers of activated state: i is the activation energy and j is the momentum. The monograph is organized into three chapters. The first of them deals with a short historical background which introduces the beginning of chemical kinetics in the historical context. The second chapter is dedicated to the transition state theory, and the third one explains the concept of effective mass and effective rate of activated state as well as

The Instrument of Science Darrell P. Rowbottom, 2019-03-25 Roughly instrumentalism is the view that science is primarily and should primarily be an instrument for furthering our practical ends It has fallen out of favour because historically influential variants of the view such as logical positivism suffered from serious defects In this book however Darrell P Rowbottom develops a new form of instrumentalism which is more sophisticated and resilient than its predecessors This position cognitive instrumentalism involves three core theses First science makes theoretical progress primarily when it furnishes us with more predictive power or understanding concerning observable things Second scientific discourse concerning unobservable things should only be taken literally in so far as it involves observable properties or analogies with observable things Third scientific claims about unobservable things are probably neither approximately true nor liable to change in such a way as to increase in truthlikeness There are examples from science throughout the book and Rowbottom demonstrates at length how cognitive instrumentalism fits with the development of late nineteenth and early twentieth century chemistry and physics and especially atomic theory Drawing upon this history Rowbottom also argues that there is a kind of understanding empirical understanding which we can achieve without having true or even approximately true representations of unobservable things In closing the book he sets forth his view on how the distinction between the observable and unobservable may be drawn and compares cognitive instrumentalism with key contemporary alternatives such as structural realism constructive empiricism and semirealism Overall this book offers a strong defence of instrumentalism that will be of interest to scholars and students working on the debate about realism in philosophy of science

The Tao of Cosmos Zhen G. Ma, 2024-07-23 Connects the philosophy of the I Ching with key recent advances in cosmology such as the Big Bang theory Roger Penrose's

cyclic conformal cosmology and his and Stuart Hameroff's cosmic quantum brain dynamics Explains the Taoist cosmology of Heaven Humanity Oneness in the context of Teilhard de Chardin's evolutionism Thomas Berry's cosmogenetic trinity and Brian Swimme's 12 cosmological powers Examines the holographic unity of Heaven Earth and Humankind at microcosmic mesocosmic and macrocosmic scales Is the universe inert and empty or is it in some way responsive to consciousness Breathing new life into a question that has perplexed philosophers since ancient times and scientists for the last century physicist Zhen G Ma Ph D offers a quantitative theory of everything that beautifully integrates ancient I Ching philosophy Eastern Taoism modern cosmology and the quantum brain dynamics of consciousness Sharing insights from his years of research on space physics and black hole spacetime complemented by studies in quantum brain dynamics and cosmological powers with Brian Swimme at the California Institute of Integral Studies Ma explains how his integrated theory draws primarily on two key paradigms in the philosophy of cosmology and consciousness Swimme's cosmic creation story of the universe as a green dragon and Roger Penrose and Stuart Hameroff's cosmic consciousness Extending these theories further Ma shows how they harmonize not only with the ancient Eastern philosophy of the oneness of heaven and humanity but also with a holographic cosmic principle that connects the quantum plasma brain with the universe and earth with heaven He then looks at this holographic unity in the cyclic process of birth growth decay and death and shows how it resonates with Einstein Friedmann's cosmological dynamics and Hawking Penrose's quantum gravity model Demonstrating a quantitative paradigm of everything Ma shows how humanity is inextricably and holistically blended into the cosmic fabric of the universe

Beyond the Dynamical Universe Michael Silberstein, W. M. Stuckey, Timothy McDevitt, 2018-02-09 Theoretical physics and foundations of physics have not made much progress in the last few decades Whether we are talking about unifying general relativity and quantum field theory quantum gravity explaining so called dark energy and dark matter cosmology or the interpretation and implications of quantum mechanics and relativity there is no consensus in sight In addition both enterprises are deeply puzzled about various facets of time including above all time as experienced The authors argue that across the board this impasse is the result of the dynamical universe paradigm the idea that reality is fundamentally made up of physical entities that evolve in time from some initial state according to dynamical laws Thus in the dynamical universe the initial conditions plus the dynamical laws explain everything else going exclusively forward in time In cosmology for example the initial conditions reside in the Big Bang and the dynamical law is supplied by general relativity Accordingly the present state of the universe is explained exclusively by its past This book offers a completely new paradigm called Relational Blockworld whereby the past present and future co determine each other via adynamical global constraints such as the least action principle Accordingly the future is just as important for explaining the present as is the past Most of the book is devoted to showing how Relational Blockworld resolves many of the current conundrums of both theoretical physics and foundations of physics including the mystery of time as experienced and how that experience relates to the block universe

Problems in Epistemology and Metaphysics Steven B. Cowan, 2020-02-06 Problems in Epistemology and Metaphysics takes a pro and con approach to two central philosophical topics. Each chapter begins with a question: Can We Have Knowledge? How are Beliefs Justified? What is the mind? Contemporary philosophers with opposing viewpoints are then paired together to argue their position and raise problems with conflicting standpoints. Alongside an up to date introduction to a core philosophical stance, each contributor provides a critical response to their opponent and clear explanation of their view. Discussion questions are included at the end of each chapter to guide further discussion. With chapters covering core questions surrounding religious beliefs, scientific knowledge, truth, being and reality, this is a comprehensive introduction to debates lying at the heart of what we know, how we know it, and the nature of the world we live in.
