building blocks used in Three.js. From there on it will expand on these subjects using extensive examples and code samples. You will learn to create or load from externally created models realistic looking 3D objects using materials and textures. You will find out how to easily control the camera using the Three.js built-in camera controls which will enable you to fly or walk around the 3D scene you created. You will then use the HTML5 video and canvas elements as a material for your 3D objects and to animate your models. Finally you will learn to use morph and skeleton based animation and even how to add physics such as gravity and collision detection to your scene. After reading this book you will know everything that is required to create 3D animated graphics using Three.js. What you will learn: Work with the different types of materials in Three.js and see how they interact with your 3D objects and the rest of the environment. Implement the different camera controls provided by Three.js to effortlessly navigate around your 3D scene. Work with vertices directly to create snow, rain, and galaxy-like effects. Import and animate models from external formats such as OBJ, STL, and COLLADA. Create and run animations using morph targets and bones animations. Explore advanced textures on materials to create realistic looking 3D objects by using bump maps, normal maps, specular maps, and light maps. Interact directly with WebGL by creating custom vertex and fragment shaders. Who this book is for: The ideal target audience for this book would be JavaScript developers who want to learn how to use the Three.js library.

[Programming 3D Applications with HTML5 and WebGL](#) Tony Parisi, 2014-02-13. Create high performance visually stunning 3D applications for the Web using HTML5 and related technologies such as CSS3 and WebGL, the emerging web graphics standard. With this book you will learn how to use the tools, frameworks, and libraries for building 3D models and animations, mind-blowing visual effects, and advanced user interaction in both desktop and mobile browsers. In two parts: Foundations and Application Development Techniques, author Tony Parisi provides a thorough grounding in theory and practice for designing everything from a simple 3D product viewer to immersive games and interactive training systems. Ideal for developers with JavaScript and HTML experience. Explore HTML5 APIs and related technologies for creating 3D web graphics including WebGL, Canvas, and CSS. Work with the popular JavaScript 3D rendering and animation libraries Three.js and Tween.js. Delve into the 3D content creation pipeline and the modeling and animation tools for creating killer 3D content. Look into several game engines and frameworks for building 3D applications including the author's Vizi framework. Create 3D environments with multiple objects and complex interaction using examples and supporting code. Examine the issues involved in building WebGL-based 3D applications for mobile browsers.

Worlds of Shadow David Wisniewski, 1996-11-15. The Wisniewskis, codirectors of the acclaimed Clarion Shadow Theatre, have modernized and simplified the techniques of the ancient art of shadow puppetry and created this easy step-by-step guide. After a brief overview of light and screen options, the authors show you how to introduce concepts of light and shadow to students. Stage directions, puppet patterns, scripts, projected scenery ideas, and a full range of astounding but readily achieved special effects help you quickly master any performance from simple songs and rhymes to full-blown stories and plays. The

special effects use such common materials as wax paper and colored plastic and no art skills are needed Suitable for the novice as well as the specialist the guide has chapters on intermediate and advanced techniques for those who desire a more varied and complex production

Shadows of Being Marko Uršič, 2019-01-15 This book is a study of the phenomena of shadows meant in a broader sense as symbolic forms The shadow is a less real surface replica of some more real form From the Platonic point of view empirical objects are shadows of ideas while from the modern natural point of view shadows are seen and conceived primarily as weaker replicas of bodies which give evidence of their material reality In the first three essays here several topics from the Ancient Egypt and Greece to modern arts and sciences are considered while in the fourth essay the contemporary virtual reality cyber technology and the internet as our parallel shadow world are discussed from the philosophical point of view The main and innovative point of this book is the connection between the meaning of shadows in philosophy and art on the one hand and their role in modern science and technology on the other The book will appeal to a wide span of readers from academic circles students and artists to the general reader interested in the humanities especially in philosophy and art

been updated to make it easier with new example games to explore and new 3D effects that make your games even more fun. Want a red donut? You can make hundreds of them spinning around like mad. Want to create a star field? Make a hundred or a thousand stars. Make them red, green, or blue. Explosions, fireworks, planets. It's up to you. And using a code editor created especially for this book, you'll program right in your web browser. You'll see the results of your work and imagination right away, right next to the code that you just typed. Along the way, you'll pick up a ton of programming knowledge and dive in even deeper with some more advanced chapters. Whatever you want to do, this book has your back. Best of all, you get to create awesome games and say, "I made this!"

You Need: You need the latest version of the Google Chrome Web browser available for free from <https://chrome.google.com>. You also need an Internet connection to access the ICE Code Editor. The first time ICE Code Editor will be loaded onto your computer, so you won't need Internet access for later projects.

Investigating Light and Shadow with Young Children (Ages 3-8) Beth Dykstra Van Meeteren, 2022-06-17. Children are intrigued by switches that power a light source and by items that reflect light and sparkle, and they take notice of personal shadows cast on the playground. An understanding of light and shadow is crucial to many STEM fields, including astronomy, biology, engineering, architecture, and more. This book shows teachers how to engage children ages 3-8 with light and shadow in a playful way, building an early foundation for the later, more complex study of this phenomena and ultimately for children's interest in professions within the STEM fields. The text offers guidance for arranging the physical environment of classrooms, integrating literacy, learning, and investigations, and building partnerships with administrators. Each volume in the STEM for Our Youngest Learners Series includes examples of educators and children engaging in inquiry, learning guidance for selecting materials, and arranging the learning environment, modifications and accommodations for diverse learners, support for establishing adult learning communities, and more.

Algebra, with Arithmetic and Mensuration, from the Sanscrit of Brahmagupta and Bhāscara, 1817 **Algebra** Brahmagupta, 1817 **Space-based Astronomy**, 1994 **Catalogue of the Officers and Students** Brown University, 1879 **The Unconscious as Space** Anca Carrington, 2024-06-03. The Unconscious as Space explores the experience of being and the practice of psychoanalysis by thinking of the unconscious in mathematical terms. Anca Carrington introduces mathematical models of space from dimension theory to algebraic topology and knot theory and considers their immediate psychoanalytic relevance. The hypothesis that the unconscious is structured like a space marked by impossibility is then examined. Carrington considers the clinical implications with particular focus on the interplay between language and the unconscious as related topological spaces in which movement takes place along knot-like pathways. The Unconscious as Space will be of appeal to psychotherapists, psychoanalysts, and mental health professionals in practice and in training.

Nexus Network Journal 11,3 Kim Williams, 2010-04-28. Baroque architect and mathematician Guarino Guarini is the subject of this issue of the Nexus Network Journal. A group of international scholars were invited to contribute papers that shed light on the unanswered questions in several areas: Baroque architecture in

general and Guarini's architecture in particular philosophy history of structural mechanics mathematics and history of mathematics cosmology As always the NNJ takes an interdisciplinary approach to the broad range of subjects that Guarini concerned himself with thus the final results will add significantly to our understanding of how Guarini's actual practical and technical processes were informed by knowledge of his multifaceted scientific and philosophical interests
