Agile Service Development Combining Adaptive Methods And Flexible Solutions:

Agile Service Development Marc Lankhorst, 2012-04-23 Economies around the globe have evolved into being largely service oriented economies Consumers no longer just want a printer or a car they rather ask for a printing service or a mobility service In addition service oriented organizations increasingly exploit new devices technologies and infrastructures Agility is the ability to deal with such changing requirements and environments Agile ways of working embrace change as a positive force and harness it to the organization s competitive advantage The approach described in this book focuses on the notion of a service as a piece of functionality that offers value to its customers Instead of solely looking at agility in the context of system or software development agility is approached in a broader context The authors illustrate three kinds of agility that can be found in an agile enterprise business process and system agility These three types of agility reinforce each other and establish the foundation for the agile enterprise Architecture patterns models and all of the best practices in system development contribute to agile service development and building agile applications This book addresses two audiences On the one hand it aims at agile and architecture practitioners who are looking for more agile ways of working in designing and building business services or who are interested in extending and improving their agile methods by using models and model based architectures On the other hand it addresses students of enterprise architecture and software development or service science courses both in computer science and in business administration *The Practice of Enterprise Modeling* Kurt Sandkuhl, Ulf Seigerroth, Janis Stirna, 2012-11-02 This volume constitutes the proceedings of the 5th IFIP WG 8.1 Working Conference on the Practice of Enterprise Modeling held in Rostock Germany during November 7-8 2012 The focus of the PoEM conference series is on improving the understanding of the practice of enterprise modeling by offering a forum for sharing experiences and knowledge between the academic community and practitioners from industry and the public sector The 15 papers presented were carefully reviewed and selected from 45 submissions and reflect different facets of enterprise modeling including organizational and social issues as well as methodological and technical aspects The papers are organized in five thematic sessions on enterprise modeling business modeling process modeling enterprise architecture and model driven development Service Innovation For Sustainable Business: Stimulating, Realizing And Capturing The Value From Service Innovation Per Kristensson, Peter Magnusson, Lars Witell, 2019-02-26 Service innovation is a concept that for the last decade has received increased attention both among academics as well as practitioners However service innovation is a multi fragmented concept which often induces confusion The main purpose of the book is to discuss and explain what service innovation is based on contemporary research It explains service innovation from three different perspectives stimulation realization and value capture Stimulation Focuses on the front end of service innovation It deals with structures cultures and processes that stimulates innovation Idea management will be a central part of this where the specifics with handling service ideas both internally and externally are illuminated Realization Deals with

aspects on how to realize service innovations This includes different aspects such as specific tools to be used for developing services and also processes such as service design which aims to receive a better understanding of the customer or user As co creation is an important aspect of service innovation this will also be dealt with Finally as many service innovations require behavior change internally within the organization and externally among the receiving parties this will also be covered Value capture Companies transitioning to become more service oriented discover the need to reconsider old business models in order to capitalize on their service offerings Services are often taken for granted and included in the price This book will addresses the problem of going from free to fee In addition the book also deals with the difficulties that involve moving from a traditional product oriented logic to a more contemporary service logic *The Routledge Companion to Innovation Management* Jin Chen,Alexander Brem,Eric Viardot,Poh Kam Wong,2019-02-14 Innovation contributes to corporate competitiveness economic performance and environmental sustainability In the Internet era innovation intelligence is transferred across borders and languages at an unprecedented rate yet the ability to benefit from it seems to become more divergent among different corporations and countries How much an organization can benefit from innovation largely depends on how well innovation is managed in it Thus there is a discernible increase in interest in the study of innovation management This handbook provides a comprehensive guide to this subject The handbook introduces the basic framework of innovation and innovation management It also presents innovation management from the perspectives of strategy organization and resource as well as institution and culture The book s comprehensive coverage on all areas of innovation management makes this a very useful reference for anyone interested in the subject Chapter 5 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license available at <http://www.taylorfrancis.com/books/9781315276670>

Enterprise Architecture at Work Marc Lankhorst,2012-08-20 An enterprise architecture tries to describe and control an organisation s structure processes applications systems and techniques in an integrated way The unambiguous

specification and description of components and their relationships in such an architecture requires a coherent architecture modelling language Lankhorst and his co authors present such an enterprise modelling language that captures the complexity of architectural domains and their relations and allows the construction of integrated enterprise architecture models They provide architects with concrete instruments that improve their architectural practice As this is not enough they additionally present techniques and heuristics for communicating with all relevant stakeholders about these architectures Since an architecture model is useful not only for providing insight into the current or future situation but can also be used to evaluate the transition from as is to to be the authors also describe analysis methods for assessing both the qualitative impact of changes to an architecture and the quantitative aspects of architectures such as performance and cost issues The modelling language presented has been proven in practice in many real life case studies and has been adopted by The Open Group as an international standard So this book is an ideal companion for enterprise IT or business architects in industry as well as for computer or management science students studying the field of enterprise architecture

Computing etc **Holonic and Multi-Agent Systems for Manufacturing** Vladimir Marik, Robert W. Brennan, Michal Pechoucek, 2005-08-29 The challenge faced in today's manufacturing and business environments is the question of how to satisfy increasingly stringent customer requirements while managing growing system complexity. For example, customers expect high quality, customizable, low cost products that can be delivered quickly. The systems that deliver these expectations are by nature distributed, concurrent, and stochastic and as a result increasingly difficult to manage. Unfortunately, the traditional hierarchical, strictly centralized approach to control used in these domains is characteristically inflexible, fragile, and difficult to maintain. These shortcomings have led to the development of a new class of manufacturing and supply chain decision making approaches in recent years. Solutions based on these approaches usually explore a set of highly distributed decision making units that are capable of autonomous operations while cooperating interactively to resolve larger problems. The units referred to as agents in classical computer science and software engineering or holons if physically integrated with the manufacturing hardware interact by exchanging information. These units are motivated by arriving at local solutions as well as collaborating and sharing resources and goals in solving the overall problem in question collectively. **Design Thinking for Smaller Enterprise Development** Adina Tarry, 2019-09-12 Design Thinking for Smaller Enterprise Development captures the zeitgeist and concerns of the new Millennium and offers a fresh view on how business can be successful by benefiting the wider society it should serve. It also highlights the systemic negative impact of a consumption and profit focussed economy and introduces an original model, SOCIETALByDesign™, as a constructive alternative to relentless resource depletion through an agile, adaptive, and respectful enterprise which protects nature and civilisation and embraces a balanced and holistic purpose to serve people, planet, and a positive legacy as the heart of its very reason of being. The original SOCIETALByDesign™ model positions purpose, principles, framework, and current techniques for a modern business to utilise and holistically integrate benefits for employees, society, and environment through its products and services. The SOCIETALByDesign™ model links purpose and business and synthesises an operating model that can be adopted, adapted, and applied by any enterprise wishing to focus on shared prosperity and the good of people and planet instead of profit at any price. The book is intended for business practitioners such as business founders and owners, angel investors, entrepreneurs, portfolio managers, investment funds managers, and leaders of companies large and small. It is also helpful for external business and organisation development consultants, mentors, coaches, and specialists who provide services and expertise to enterprises design change and optimisation. Because the book provides a practitioner's perspective on business, it can also be useful to students, lecturers, and academics. *People Before Tech* Duena Blomstrom, 2021-05-13 A fascinating guide for business leaders looking to ensure that their teams remain productive and engaged in the digital era.
