New Achievements in Evolutionary Computation Peter Korosec,2010-02-01 Evolutionary computation has been widely used in computer science for decades Even though it started as far back as the 1960s with simulated evolution the subject is still evolving During this time new metaheuristic optimization approaches like evolutionary algorithms genetic algorithms swarm intelligence etc were being developed and new fields of usage in artificial intelligence machine learning combinatorial and numerical optimization etc were being explored However even with so much work done novel research into new techniques and new areas of usage is far from over This book presents some new theoretical as well as practical aspects of evolutionary computation This book will be of great value to undergraduates graduate students researchers in computer science and anyone else with an interest in learning about the latest developments in evolutionary computation

Metaheuristics for Finding Multiple Solutions Mike Preuss,Michael G. Epitropakis,Xiaodong Li,Jonathan E. Fieldsend,2021-10-22 This book presents the latest trends and developments in multimodal optimization and niching techniques Most existing optimization methods are designed for locating a single global solution However in real world settings many problems are multimodal by nature i e multiple satisfactory solutions exist It may be desirable to locate

several such solutions before deciding which one to use Multimodal optimization has been the subject of intense study in the field of population based meta heuristic algorithms e g evolutionary algorithms EAs for the past few decades These multimodal optimization techniques are commonly referred to as niching methods because of the nature inspired niching effect that is induced to the solution population targeting at multiple optima Many niching methods have been developed in the EA community Some classic examples include crowding fitness sharing clearing derating restricted tournament selection speciation etc Nevertheless applying these niching methods to real world multimodal problems often encounters significant challenges To facilitate the advance of niching methods in facing these challenges this edited book highlights the latest developments in niching methods The included chapters touch on algorithmic improvements and developments representation and visualization issues as well as new research directions such as preference incorporation in decision making and new application areas This edited book is a first of this kind specifically on the topic of niching techniques This book will serve as a valuable reference book both for researchers and practitioners Although chapters are written in a mutually independent way Chapter 1 will help novice readers get an overview of the field It describes the development of the field and its current state and provides a comparative analysis of the IEEE CEC and ACM GECCO niching competitions of recent years followed by a collection of open research questions and possible research directions that may be tackled in the future
