Quality of Experience for Multimedia Abdelhamid Mellouk, Hai Anh Tran, Said Hoceini, 2013-12-04 Based on a convergence of network technologies the Next Generation Network NGN is being deployed to carry high quality video and voice data In fact the

convergence of network technologies has been driven by the converging needs of end users. The perceived end-to-end quality is one of the main goals required by users that must be guaranteed by the network operators and the Internet Service Providers through manufacturer equipment. This is referred to as the notion of Quality of Experience (QoE) and is becoming commonly used to represent user perception. The QoE is not a technical metric but rather a concept consisting of all elements of a user's perception of the network services. The authors of this book focus on the idea of how to integrate the QoE into a control command chain in order to construct an adaptive network system. More precisely in the context of Content Oriented Networks used to redesign the current Internet architecture to accommodate content oriented applications and services, they aim to describe an end-to-end QoE model applied to a Content Distribution Network architecture.
