Algorithms to Live By Brian Christian, Tom Griffiths, 2016-04-19 An exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind What should we do or leave undone in a day or a lifetime How much messiness should we accept What balance of the new and familiar is the most fulfilling These may seem like uniquely human quandaries but they are not Computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades And the solutions they've found have much to teach us In a dazzlingly interdisciplinary work Brian Christian and Tom Griffiths show how algorithms developed for computers also untangle very human questions They explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others From finding a spouse to finding a parking spot from organizing one's inbox to peering into the future Algorithms to Live By transforms the wisdom of computer science into strategies for human living

Local Theories of Argument Dale Hample, 2021-03-25 Argumentation is often understood as a coherent set of Western theories birthed in Athens and developing throughout the Roman period the Middle Ages the Enlightenment and Renaissance and into the present century Ideas have been nuanced developed and revised but still the outline of argumentation theory has been recognizable for centuries or so it has seemed to Western scholars The 2019 Alta Conference on Argumentation co sponsored by the National Communication Association and the American Forensic Association aimed to question the generality of these intellectual traditions This resulting collection of essays deals with the possibility of having local theories of argument local to a particular time a particular kind of issue a particular place or a particular culture Many of the papers argue for reconsidering basic ideas about arguing to represent the uniqueness of some moment or location of discourse Other scholars are more comfortable with the Western traditions and find them congenial to the analysis of arguments that originate in discernibly distinct circumstances The papers represent different methodologies cover the experiences of different nations at different times examine varying sorts of argumentative events speeches court decisions food choices and sound explore particular personal identities and the issues highlighted by them and have different overall orientations to doing argumentation scholarship Considered together the essays do not generate one simple conclusion but they stimulate reflection about the particularity or generality of the experience of arguing and therefore the scope of our theories

Information Michele Kennerly,Samuel Frederick,Jonathan E. Abel,2021-01-19 For decades we have been told we live in the information age a time when disruptive technological advancement has reshaped the categories and social uses of knowledge and when quantitative assessment is increasingly privileged Such methodologies and concepts of information are usually considered the provenance of the natural and social sciences which present them as politically and philosophically neutral Yet the humanities should and do play an important role in interpreting and critiquing the historical cultural and conceptual nature of information This book is one of two companion volumes that explore theories and histories of information from a humanistic perspective They consider

information as a long standing feature of social cultural and conceptual management a matter of social practice and a fundamental challenge for the humanities today Bringing together essays by prominent critics Information Keywords highlights the humanistic nature of information practices and concepts by thinking through key terms It describes and anticipates directions for how the humanities can contribute to our understanding of information from a range of theoretical historical and global perspectives Together with Information A Reader it sets forth a major humanistic vision of the concept of information

Developing Informed Intuition for Decision-Making Jay Liebowitz,2019-07-19 This book examines how to develop the main traits that are necessary to become an informed intuitant Case studies and examples of successful informed intuitants are a major component of the book Intuitant is someone who has the intuitive awareness to be successful Informed intuitant indicates that the individual

decision maker not only applies his/her intuition but also verifies it through using data driven approaches such as data analytics. Some of this work resulted from research examining how well do executives trust their intuition. An Artificial History of Natural Intelligence David W. Bates, 2024-04-02. A new history of human intelligence that argues that humans know themselves by knowing their machines. We imagine that we are both in control of and controlled by our bodies, autonomous and yet automatic. This entanglement according to David W. Bates emerged in the seventeenth century when humans first built and compared themselves with machines. Reading varied thinkers from Descartes to Kant to Turing, Bates reveals how time and time again technological developments offered new ways to imagine how the body's automaticity worked alongside the mind's autonomy. Tracing these evolving lines of thought, An Artificial History of Natural Intelligence offers a new theorization of the human as a being that is dependent on technology and produces itself as an artificial automaton without a natural outside origin.

Knowledge 2.0 - Staying Afloat in the Information Age

Chisnell, 2024-01-03. Our access to knowledge is extraordinary, much of it available through a smartphone that rarely leaves our side. The problem is no longer finding information; it's sifting it for the good stuff. Facts are often distorted by laziness or incompetence, and truths are sometimes twisted or hidden for financial gain or to evade the consequences of mistakes or failures. It doesn't help that we as human beings have trouble discerning truth from untruth and fact from fiction. There is a powerful personal component to what we carry around with us in our heads and call knowledge. We process and generate information with a set of unique experiences and biases, but we all have traits that can predispose us to error. This is a user's guide on how to navigate this new world of knowledge. This book explores both across six types of knowledge that are vital to staying afloat in the 21st century. Narrative story is the single most powerful form of knowledge, and that alone makes it both incredibly useful and incredibly dangerous. Confidence: knowing the limits of our knowledge is central to using that knowledge effectively. Prediction: if we had perfect knowledge of the future, we'd be very wealthy and very safe. Science: scientific knowledge is ubiquitous in modern life; it's crucial to understand the processes that generate it. Chance: randomness controls a frightening amount of our lives, much more than many of us understand. Problem solving: no one's going to stay afloat in the Information Age unless they can fill knowledge gaps and find solutions. This is a book about understanding that our knowledge of the world can only ever approximate what's really out there and using that insight to make good decisions for ourselves and our families about everything from jobs to healthcare and personal finance. **Reviews:** Mark Chisnell's fascinating book uses racing and sailing triumphs and tragedies to analyse human behaviour, decision making and problem solving, offering insight into the best way we can use the knowledge we have to react to a given situation. An insightful read for sailors and non-sailors alike. **PBO:** The author formulates a kind of popular epistemology that divides the various kinds of knowledge into six categories and then anatomizes the vices and virtues of each of them as sources of belief. His prose is unfailingly clear, and he illustrates his points with references to sailing. The best of his treatment is the appraisal of scientific

authority *We Built Reality* Jason Blakely, 2020-06-02 Over the last fifty years pseudoscience has crept into nearly every facet of our lives Popular sciences of everything from dating and economics to voting and artificial intelligence radically changed the world today The abuse of popular scientific authority has catastrophic consequences contributing to the 2008 financial crisis the failure to predict the rise of Donald Trump increased tensions between poor communities and the police and the sidelining of nonscientific forms of knowledge and wisdom In *We Built Reality* Jason Blakely explains how recent social science theories have not simply described political realities but also helped create them But he also offers readers a way out of the culture of scientism hermeneutics or the art of interpretation Hermeneutics urges sensitivity to the historical and cultural contexts of human behavior It gives ordinary people a way to appreciate the insights of the humanities in guiding decisions As Blakely contends we need insights from the humanities to see how social science theories never simply neutrally describe reality they also help build it **How Do You Know?** J.M. Beach, 2017-11-13 This book defines the concept and practices of literacy through a discussion of knowledge information media culture subjectivity science communication and politics Examining the ways in which the spread of literacy and education have caused culture wars in pluralist societies since the 16th century the author reviews an interdisciplinary array of scholarly literature to contend that science and more broadly evidence based inductive arguments offer the only reliable source information and the only peaceful solution to cultural conflict in the 21st century With a focus on the multifaceted practice of literacy as communication as embedded within larger social and political processes this book offers a comprehensive study of literacy through five core topics knowledge psychology culture science and arguing over truth in pluralist democracies The central thesis of the book argues that we require a new literacy that incorporates reading and writing with advanced cognitive and epistemological skills Today's citizens need to be able to understand the basic cognitive and cultural processes through which knowledge is created and they need to know how to evaluate knowledge peacefully debate knowledge and productively use knowledge for both personal decisions and public policy *How Do You Know The Epistemological Foundations of 21st Century Literacy* is an interdisciplinary study that will appeal to scholars across the sciences and humanities especially those concerned with pedagogy and the science of learning **Controllable Artificial Intelligence and the Future of Law** Hugo Luz dos Santos, 2025-11-08 This book broaches the newly crafted concept of algorithmic dictatorship that draws on a plethora of human biases that creep into the algorithm and feeds into an automated decision that comes to the expense of citizens lives freedoms health property fair lending and credit scoring This book sheds a keen light on the slew of reasons in view of which artificial intelligence should be both interpretable and controllable as opposed to merely explainable The reason for that is straightforward the skewed data baked into the bigoted algorithms machine biases spawns harrowing effects with which criminal justice has been grappling for a long haul drawn out Tallyingly and perhaps unsurprisingly law enforcement evinces biases that run along both gender and race lines No surprise springs from the fact that computer

generated algorithms that propel predictive policing are often flagged as tools whereby racial discrimination abounds. It should not therefore be pegged as flabbergasting that this sort of shady algorithmic governance is a byproduct of a grueling algorithmic dictatorship that is shaping up to crumble the foundations of Rule of Law upon which stands modern societies. This is one of the key takeaways of this book. Disturbingly enough, brain computer interfaces are poised to be converted into shady tools to collate gauge thoughts, emotions, sentiments, and crime-related information that would be otherwise inaccessible to the governments, rogue nations, or unscrupulous actors prying eyes. Much to our dismay, an eerily dystopian world is unfolding before our very eyes. This is the gist of transhumanism, a byproduct of convolutional neural networks that revolve around deep learning genetic algorithms that will overhaul the current legal landscape beyond recognition. This book charts the path ahead as to draw set in stone boundaries to prevent jurisdictions from careening into the chaos of genetic plutocracy that should be wished away.

Privacy in the Age of Neuroscience David Grant, 2021-04-15. Neural technologies are intruding deeply into our lives. David Grant argues we can take advantage of them by reconceptualizing privacy.

Responsible AI and Ethical Issues for Businesses and Governments Vassileva, Bistra, Zwillig, Moti, 2020-10-16. The research surrounding artificial intelligence (AI) is vast and quite diverse in both its applied and theoretical fields. AI tools and techniques such as machine learning, data mining, neural networks, and advanced analytics are evolving at a high speed, creating a consistent need for updated research. This is especially relevant with frequent developments for the application of AI technology in many science and industry sectors. This rapid expansion created a need for research that focuses on the questions surrounding the development of AI, such as ethical issues, responsible AI methods and applications, and its widespread implementation. Within the answers to these questions is the prevailing notion that AI should be accountable, explainable, transparent, and fair for all organizations and individuals. *Responsible AI and Ethical Issues for Businesses and Governments* widens the understanding of AI outside of the narrow technical perspective to a broader viewpoint that embraces the links between AI theory, practice, and policy. The chapters in this book discuss the basic philosophical and conceptual foundations of AI and explore the responsible application of AI tools and methods, the moral aspects of AI, practical issues, and responsible AI implementation across a range of industries. While highlighting topics that include digital transformation, ethical competence, information literacy in AI, and the interaction between AI and humans, this book is ideally designed for IT specialists, technology developers, technologists, ethicists, practitioners, stakeholders, academicians, students, and researchers who are interested in learning more about the ethical and responsible use of AI.
