Low-Dimensional Materials, Systems and Applications, Volume 1 Purushottam Chakraborty, Dambarudhar Mohanta, 2025-10-01 Low Dimensional Materials Systems and Applications Volume 1 Principles Methods and Approaches in Electronics and Photonics showcases the complexities and uniqueness of low dimensional materials and highlights the most recent discoveries in the fields of electronics and photonics Low dimensional nanoscale materials are challenging as they exhibit properties distinctly different from their bulk counterparts There is an exponential increase of reactivity at the molecular level due to high surface to volume ratios in these materials and not only are their electronic optical and chemical properties different so too are their mechanical characteristics This book highlights the state of the art theoretical and experimental descriptions of the complexities unique properties and latest applications of low dimensional materials with a particular focus on the fields of electronics and photonics The book is primarily for researchers working on the simulation fabrication analysis and uses of low dimensional nanoscale materials including materials scientists electrical engineers condensed matter physicists and chemists Serves as a comprehensive ready reference for beginners researchers and expert practitioners working on the understanding and manipulation of low dimensional structures in electronics and photonics Presents the latest theoretical and experimental approaches and complexities of low dimensional materials research Features contributions from leading experts in the field of low dimensional materials

Physics and Mechanics of New Materials Devrim Balkose, Ana Cristina Faria Ribeiro, Nandakumar Kalarikkal, Ann Rose Abraham, A. K. Haghi, 2024-11-29 This new volume covers new advances in materials science and engineering technology focusing on practical rather than theoretical aspects that are useful for the design fabrication testing and industrial application of advanced materials and structures It provides an overview of modern ferrites with special attention to their structure types and properties discusses the impact of technological change upon the application of selected materials and energy resources and presents case studies in thermophysics and applied mechanics for engineering technology that illustrate the physical chemical and material properties of a range of modern materials

Particle Dynamics with Aggregation and Fragmentation Culbert B. Laney, 2025-04-16 Particle dynamics with aggregation and fragmentation occurs in almost every branch of science and engineering Examples include the formation of stars and planets in astrophysics the formation of colloids and polymers in chemistry the formation of raindrops and snowflakes in meteorology the formation of fuel sprays in mechanical engineering impact damage to aircraft and satellites in aerospace engineering and drilling and blasting in civil and mining engineering This is one of the first textbooks to give particle dynamics with aggregation and fragmentation a full treatment putting it on an equal footing with fluid dynamics and solid mechanics To help readers understand the connections to fluid dynamics this book shows how particle dynamics occurs in ideal gases granular gases and fluid turbulence Instead of relying on empirical results that apply only under specific circumstances the book uses broad physical principles such as

conservation of mass momentum and energy The text draws on rigorous mathematical theory and modern high performance computing while avoiding the complex details The book also provides extensive references for those readers who need them While intended for a graduate level audience the book is written in a graphically rich style which will be accessible to advanced undergraduates In particular it includes over 100 figures and over 200 examples most of which are placed into grey boxes to avoid interrupting the main text While surveying the relevant research literature this book also draws on the author's unique insights into particle aggregation and fragmentation gained from participating in relevant research and development activities in industry and academia for over 25 years
