Agricultural, Biosystems, and Biological Engineering Education Umezuruike Linus Opara, 2024-09-30 Agricultural engineering developed as an engineering discipline underpinned by physics applies scientific principles knowledge and technological innovations in the agricultural and food industries During the last century there was

exponential growth in engineering developments which has improved human wellbeing and radically changed how humans interact with each other and our planet Among these Agricultural Mechanization is ranked among the top 10 in a list of 20 Top Engineering Achievements of the last century that have had the greatest impact on the quality of life While many success stories abound the problems of low appeal among students identity crises and limited job opportunities in many climes continue to trouble the discipline s future in many parts of the world Yet agriculture and agricultural engineering remain fundamental to assuring food and nutrition security for a growing global population Agricultural Biosystems and Biological Engineering Education provides the first comprehensive global review and synthesis of different agricultural biosystems and biological engineering education approaches including a detailed exposition of current practices from different regions Key Features Describes novel approaches to curriculum design and reform Outlines current and emerging epistemology and pedagogies in ABBE education Provides a framework to grow agricultural engineering in Africa and other developing regions Highlights the role of ABBE education in the context of the SDGs Presented in 3 parts and containing 42 chapters this book covers the historical evolution of agricultural engineering education and discusses the emergence of biological and biosystems engineering education It will appeal to engineers and other professionals education planners and administrators and policy makers in agriculture and other biological industries Chapters 4 11 19 32 and 41 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Fuzzy Logic Dynamics and Machine Prediction for Failure Analysis

Mushiri, Tawanda, Mbowhwa, Charles, 2018-01-12 In the fast pace of the modern world it is important more than ever for factories to know how and why their machines are failing and what can be done to prevent it As such it is imperative that new research is conducted to make sure that factories can operate as efficiently as possible Fuzzy Logic Dynamics and Machine Prediction for Failure Analysis is an essential reference source for the newest research on the risk assessment matrix ladder logic and computerized maintenance management systems CMMS Featuring widespread coverage across a variety of related viewpoints and topics such as the Ishikawa diagram machinery failure analysis and troubleshooting model reference adaptive control systems and proportional integral derivative PID controllers this book is ideally designed for professionals upper level students and academics seeking current research on the implementation of fuzzy logic in machine prediction failure
