Finance and Hedging in the Commercial Airline Industry Tony Webber,2024-09-13 When there is political tension or war in the Middle East or in Eastern Europe oil and jet fuel prices shoot upward If an airline isn t protected against these higher

prices they can devastate its finances and send it quickly into bankruptcy This seemingly happens on a yearly basis Thankfully for most airlines they are able to protect themselves against higher oil and jet fuel prices at least in the short term by hedging using financial instruments The challenge for airlines is to determine which financial instruments they should use in which products they should hedge and how far out from fuel consumption they should hedge This book systematically explores the different financial instruments that airlines have to choose from and in what situations they should be used It will also present the reader with the options airlines have in terms of manipulating operational levers in response to higher fuel prices such as airfares capacity and fleet size once the protective benefits of hedging wear off **International**
