The Problem with Software Adam Barr, 2018-10-23 An industry insider explains why there is so much bad software and why academia doesn't teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It's an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship

Hacking in the Humanities Aaron Mauro, 2022-05-05 What would it take to hack a human How exploitable are we In the cybersecurity industry professionals know that the weakest component of any system sits between the chair and the keyboard This book looks to speculative fiction cyberpunk and the digital humanities to bring a human and humanistic perspective to the issue of cybersecurity It argues that through these stories we are able to predict the future political cultural and social realities emerging from technological change Making the case for a security minded humanities education this book examines pressing issues of data security privacy social engineering and more illustrating how the humanities offer the critical technical and ethical insights needed to oppose the normalization of surveillance disinformation and coercion Within this counter cultural approach to technology this book offers a model of activism to intervene and meaningfully resist government and corporate oversight online In doing so it argues for a wider notion of literacy which includes the ability to write and fight the computer code that shapes our lives

Contingent Computation M. Beatrice Fazi, 2018-11-15 In *Contingent Computation* M Beatrice Fazi offers a new theoretical perspective through which we can engage philosophically with computing The book proves that aesthetics is a viable mode of investigating contemporary computational systems It does so by advancing an original conception of computational aesthetics that does not just concern art made by or with computers but rather the modes of being and becoming of computational processes

Contingent Computation mobilises the philosophies of Gilles Deleuze and Alfred North Whitehead in order to address aesthetics as an ontological study of the generative potential of reality Through a novel philosophical reading of G del s incompleteness theorems and of Turing s notion of incomputability Fazi finds this potential at the formal heart of computational systems and argues that computation is a process of determining indeterminacy This indeterminacy which is central to computational systems does not contradict their functionality Instead it drives their very operation albeit in a manner that might not always fit with the instrumental representational and cognitivist purposes that we have assigned to computing

Software Practitioner Akram Ahmad,2021-03-12 Beautifully wrought prose many will agree wields the power to make one s heart skip a beat And elegantly crafted code has been known to make a heart sing So why has nobody looked at these seemingly unrelated phenomena as a unified whole We can as the author demonstrates in this book divergent thinking style

look past the superficial similarities between the endeavor each of crafting prose and that of designing code writers rewrite their prose while programmers refactor their code both work with abstractions neither is immune to the occasional blockage of creative flow which manifests itself in the writer's block and in the coder's jam respectively and so on That's quotidian stuff And much deeper forces are at play the author believes forces which inform their respective practice How best to tease those out into revealing themselves so we can witness those forces in their glory Enter this book Written as a series of letters to the practitioner it connects the dots between the ins and outs of crafting prose and those of designing code tying the two together with the proverbial marriage knot by delving deep into the interplay between the two No longer will we have to scratch our head wondering why nobody took on this vital interplay sooner In this book the author takes on nothing less than a rejuvenation of the craft by drawing on his experience of two decades as 1 a devoted software practitioner and as 2 an inveterate writer He happens to be the impresario of the immensely popular blog for geeks and non geeks alike

ProgrammingDigressions Among the many reflections which await you in the pages of this book Can a practitioner care as much about the craft of prose as about designing code Is one born with the skill of writing well or can it be cultivated More fundamentally how best to learn things deeply and to their core Where will our insatiable thirst for collecting idioms lead us Does it make sense to diversify More pointedly how best to engage both our left brain think the analytical and the logical and the right brain think the creative and the inspired in our daily work This book is for geeks and non geeks alike Coming on the heels of the author's two acclaimed books Dispatches from the Software Trenches and Postcards From The Software Island in The Programming Imagination series this book is for anyone who believes that playfulness is decidedly underrated that life is positively not a zero sum game and it's especially for those who seek to rejuvenate the craft itself Hence the subtitle Essays on Rejuvenating the Craft Oh so the author himself a non native speaker and lover of the English language wishes to make it abundantly clear that he does not consider himself a modern day Joseph Conrad who just happened to be another non native speaker of the English language Far from it though the author candidly professes to have taken inspiration from at least some of the prose passages by said Polish writer one who is regarded as one of the greatest novelists in the English language and one who relevantly enough to the ethos of this book famously remarked how My task which I am trying to achieve is by the power of the written word to make you hear to make you feel it is before all to make you see Wow Talk about a lofty ideal And if the book you hold takes you a modest halfway to that ideal the author will chalk this up as job accomplished
