Modulation of Neurochemical Transmission

E. S. Vizi, 2013-10-22 *Modulation of Neurochemical Transmission Volume II* documents the proceedings of the 3rd Congress of the Hungarian Pharmacological Society held in Budapest 1979. It provides a summary of biochemical, electrophysiological, morphological and pharmacological findings on the modulation of transmitter release. The 45 papers contained in this volume come from the most important laboratories and the contributors are among the world's foremost experts. Key topics discussed include the presynaptic inhibition of neurotransmitters, the properties of pre and postsynaptic receptors, histochemical mapping of dopamine neurons in the olfactory brain, neurophysiological aspects of dopaminergic supersensitivity, the role of ATPases in neurochemical transmission and interaction between noradrenaline and vanadium on brain membrane ATPase. Also presented are papers on neurotransmission in the rat portal vein, the function of cysteine metabolism in rat brain, presynaptic dopamine receptors in sympathetic heart nerves of cats, LSD induced behavioral effects in rats and modulation of posttetanic response in the guinea pig ileum.

Airways Smooth Muscle David Raeburn,Mark A. Giembycz,2013-03-09 Many factors may influence the release of neurotransmitters from airway nerves 1 This is likely to be important in physiological control of airway functions and may be particularly relevant in airway diseases such as asthma and chronic obstructive pulmonary disease COPD Neural elements in airways interact in a complex manner and the activation of certain neural pathways may profoundly influence the release of transmitters from other neural pathways Similarly inflammatory mediators released from inflammatory cells in the airways may also modulate neurotransmitter release There are marked differences between species in airway innervation and in neuromodulatory effects and wherever possible studies in human airways have been emphasised although information on neuromodulation in human airways is somewhat limited at present Release of neurotransmitters from nerve terminals occurs via a Ca^{2+} dependent secretion evoked by a nerve action potential but may also be evoked experimentally by a high extracellular K^{+} concentration which directly depolarises the nerve terminal membrane Modulation refers to the alteration of neurotransmitter release which may either be increased facilitation or reduced inhibition by the action of a particular agent thus changing the magnitude of the neurally mediated response Such agents would normally act on receptors on the nerve terminal which are referred to as pre junctional or presynaptic receptors in contrast to post junctional or post synaptic receptors located on the target cells which are influenced by that particular transmitter

Psychopharmacology Abstracts ,1973 **Regulatory Function of Adenosine** Robert M. Berne, Theodore W. Rall, Rafael Rubio, 2012-12-06 The principal objective of this symposium was to bring together investigators from all over the world who work in diverse areas of research but share a common interest in the physiologic and pathophysiologic functions of the nucleoside adenosine In 1978 the International Conference on Physiological and Regulatory Functions of Adenosine and Adenine Nucleotides held in Banff Canada served as an effective catalyst in enabling scientists with different points of view to exchange information and ideas on this subject Since 1978 the amount of research on different aspects of adenosine metabolism mechanism of action transport and function in various tissues in both normal and abnormal states has increased exponentially and there was an urgent need for another meeting for updating information on this burgeoning subject The focus of the meeting was extremely sharp but the scope of the subject material was very broad Scientists categorized as chemists biochemists physiologists pharmacologists and immunologists working with cells and cell fragments with tissues such as heart brain muscle fat kidney and with human beings having immune deficiency diseases participated in the symposium They had an opportunity to air their differences reinforce their areas of agreement and most important they educated each other with respect to research on adenosine it is hoped that they also enriched their own research programs from the information they gained from their fellow participants

Muscle Laszlo Szekeres, Julius G. Papp, 2012-12-06 Eighty years have passed since Arthur Heffter the founder of this handbook series invited in 1913 eminent scientists from different parts of the world to contribute At that time 6 10 years were needed to publish the first two volumes which appeared between 1919 and 1923 During these 80 years pharmacology as an independent science has undergone tremendous development which is reflected truly and comprehensively by the ever growing number of volumes in the now classic series of Heffter Heubner's Handbook of Experimental Pharmacology The Editorial Board of distinguished world wide known experienced pharmacologists assumed responsibility for finding and editing the most current and most interesting topics keeping in mind that some evergreen topics should be brushed up from time to time when sufficient new knowledge has accumulated In this sense it is surprising that the highly popular topic of ever growing importance namely pharmacology of smooth muscle has in the knowledge of the editors of this volume never been treated as such Even the of smooth muscle edited by classic volume on the structure and function Bilbring Brading Jones and Tomita Smooth Muscle 1981 is more than 12 years old So we think it is justified to say that the present volume really fills a gap We were lucky to be able to invite eminent scientists working in this field and persuade them of the importance of their contributions which cover the most important aspects of this wide ranging topic
