Next Generation Wireless Communication Mohammed El Ghzaoui, Sudipta Das, Varakumari Samudrala, Nageswara Rao Medikundu, 2024-07-23 This book provides an overview of the most common techniques and methods employed in wireless fields. Conversely, it delves into a detailed study of millimeter wave mm wave and terahertz THz systems with a focus on various schemes for transmitting and receiving electromagnetic waves. The title comprehensively reviews key elements associated with wireless communications, emphasizing the generation and detection of mm and THz waves. It explores specifications, innovations in new materials for high speed terahertz and millimeter wave technology, and considerations related to components and system aspects. Additionally, the book explores the integration of machine learning ML and artificial intelligence AI in smart communication systems along with potential applications for advanced wireless communications. Furthermore, it concentrates on recent advances and diverse research prospects in Next Generation Wireless Communication Technologies. The book also seeks theoretical, methodological, well established, and validated empirical work addressing these various topics. Sensor Imaging Systems for Real-Time Applications S. Kannadhasan, R. Nagarajan, T. Kamalakannan, M. Chandrasekaran, N. Shanmugasundaram, 2025-09-12 Recent sensor technologies have spurred innovation across many industries and have been employed worldwide to improve transportation, medical treatment, nanotechnology, mobile devices, virtual and augmented reality, and artificial intelligence. This new volume looks at different aspects and kinds of sensors such as wearable, radio frequency devices, machine learning algorithms for sensors, intelligent monitoring systems using RFID technologies, UV based control systems, Booth algorithm based sensors for improved multipliers, sensor data analysis using Arduino, piezoelectric sensor signaling, and more. Myriad examples of novel applications of sensor technology are presented in different areas such as: In disaster management such as for accident detection and rescue systems; For development of smart healthcare technology such as for early prediction of breast cancer monitoring and gauging of polluted air to alert for asthma triggers; In transportation such as in the development of smart helmets for protective driving for vehicle to vehicle communication for accident prevention for enabling vehicles to sense rough terrain; In urban engineering smart city management such as for locating underground cable faults for sewage surveillance for blockages and hazardous gases and chemical contaminants; In agriculture such as using sensors for agricultural pest control using IoT for automated drip irrigation; For residential and office use such as for energy management systems for monitoring ergonomic behaviors. Other chapters present sensor technology for audio and voice impaired individuals for smart shopping using smart trolley and more. Offering a plethora of examples of how sensor imaging can be applied for real time solutions, this volume will provide inspiration for industry professionals and faculty and students in electronics and communication engineering interested in finding solutions to today's problems using sensor technology. Research Advances in Network Technologies Anshul Verma, Pradeepika Verma, 2024-09-26 In the present technological age, information is a valuable

resource for both small and large enterprises as well as for our daily lives The key enablers that link computer resources and devices together to gather process and distribute crucial data both locally and worldwide are network technologies For our daily lives and commercial operations network technologies offer effective adaptable and seamless communication while maximizing productivity and resources Due to its significance this field has undergone a significant evolution in the past few decades moving away from traditional wired networks and toward Bluetooth infrared microwave radio and satellite networks These days network technologies are not employed only in computer labs businesses or homes a wide range of domains such as vehicular ad hoc networks mobile ad hoc networks and the Internet of Things have been seen using network technologies Researchers from academia and industry have worked hard to build and develop software based network technologies such as middleware protocol stacks and network software architectures in addition to hardware based and physical network technologies The paradigm shift in this field is being driven primarily by software based network technologies which have also given rise to numerous new network innovations including grid computing cloud computing fog computing edge computing software defined networks and content centric networks Significant efforts have been made in cellular network technologies to boost the user experience and as a result new cellular network technologies including LTE VoLTE and 5G have also been developed Efforts continue to be made by researchers in these networking fields due to the demand for and importance of these technologies in present and future situations Many of these efforts are still in progress and there are still possibilities that need to be investigated As a result it s important to stay up to date on network technology developments and look into further research difficulties that need to be resolved for the benefit of users This book will present the most recent and leading research in the field of network technologies in order to achieve solutions for various problems that exist in this domain
