Energy and the New Reality 1 Danny Harvey,2010-08-12 Reducing and managing humanity s demand for energy is a fundamental part of the effort to mitigate climate change In this the most comprehensive textbook ever written on the subject L D Danny Harvey lays out the theory and practice of how things must change if we are to meet our energy needs sustainably The book begins with a succinct summary of the scientific basis for concern over global warming then outlines energy basics and current patterns and trends in energy use This is followed by a discussion of current and advanced technologies for the generation of electricity from fossil fuels The book then considers in detail how energy is used and how this use can be dramatically reduced in the following end use sectors buildings transportation industry food and agriculture municipal services The findings from these sector by sector assessments are then applied to generate scenarios of how global energy demand could evolve over the coming decades with full implementation of the identified and economically feasible energy

saving potential The book ends with a brief discussion of policies that can be used to reduce energy demand but also addresses the limits of technologically based improvements in efficiency in moderating demand and of the need to re think some of our underlying assumptions concern ends with a brief discussing what we really need Along with its companion volume on C free energy supply and accompanied by extensive supplementary online material this is an essential resource for students and practitioners in engineering architecture environment and energy related fields Online material includes Excel based computational exercises teaching slides for each chapter links to free software tools

Managing Indoor Climate Risks in Museums Bart Ankersmit, Marc H.L. Stappers, 2016-09-28 This book elaborates on different aspects of the decision making process concerning the management of climate risk in museums and historic houses The goal of this publication is to assist collection managers and caretakers by providing information that will allow responsible decisions about the museum indoor climate to be made The focus is not only on the outcome but also on the equally important process that leads to that outcome The different steps contribute significantly to the understanding of the needs of movable and immovable heritage The decision making process to determine the requirements for the museum indoor climate includes nine steps Step 1 The process to make a balanced decision starts by clarifying the decision context and evaluating what is important to the decision maker by developing clear objectives In Step 2 the value of all heritage assets that are affected by the decision are evaluated and the significance of the building and the movable collection is made explicit Step 3 The climate risks to the moveable collection are assessed Step 4 Those parts of the building that are considered valuable and susceptible to certain climate conditions are identified Step 5 The human comfort needs for visitors and staff are expressed Step 6 To understand the indoor climate the building physics are explored Step 7 The climate specifications derived from step 3 to 5 are weighed and for each climate zone the optimal climate conditions are specified Step 8 Within the value framework established in Step 1 the options to optimize the indoor climate are considered and selected Step 9 All options to reduce the climate collection risks are evaluated by the objectives established in Step 1
