Jet physics in ALICE Constantin Loizides, 2012-02-03 The ALICE experiment is one of the experiments currently prepared for the Large Hadron

Collider LHC at CERN Geneva starting operation end of 2007 ALICE is dedicated to the research on nucleus nucleus collisions at ultra relativistic energies which addresses the properties of strongly interacting matter under varying conditions of high density and temperature The conditions provided at the LHC allow significant qualitative improvement with respect to previous studies In particular energetic probes light quarks and gluons will be abundantly produced These probes might be identified by their fragmentation into correlated particles so called jets of high enough energy to allow full reconstruction of jet properties even in the underlying heavy ion environment Understanding the dependence of high energy jet production and fragmentation influenced by the dense medium created in the collision region is an open field of active research Generally one expects energy loss of the probes due to medium induced gluon radiation It is suggested that hadronization products of these rather soft gluons may be contained within the jet emission cone resulting in a modification of the characteristic jet fragmentation as observed via longitudinal and transverse momentum distributions with respect to the direction of the initial parton as well as of the multiplicity distributions arising from the jet fragmentation Particle momenta parallel to the jet axis are softened jet quenching while transverse to it increased transverse heating The present thesis studies the capabilities of the ALICE detectors to measure these jets and quantifies obtainable rates and the quality of jet reconstruction in both proton proton and lead lead collisions at the LHC In particular it is addressed whether modification of the jet fragmentation can be detected within the high particle multiplicity environment of central lead lead collisions

Orbis Scientiae Deeper Pathways in High-Energy Physics Stephan Mintz, 2013-11-21 These proceedings contain the papers presented during the 14th annual High Energy Physics meeting convened under the aegis of Orbis Scientiae 1977 The title Deeper Pathways in High Energy Physics was adopted to indicate either further penetration into the nature of the structure of the elementary particle or the deepening of the continuously trodden path that gets gradually deeper and deeper evolving into a trench In the latter instance the visibility of the real nature of elementary particles may be getting dimmer and dimmer It is hoped that some of the papers in these proceedings do indeed contain further revelations on the deeper nature of elementary particles We must not be overly charmed with charm even if it may fit the data of the current generation of e and e experiments It would be much less than prophetic to say that a complete and totally satisfactory theory comprising the entire physical reality is yet to be discovered and there is presumably no paper of that kind in these proceedings Despite this short coming the editors do not wish to hide their admiration for the caliber of the papers contributed by the participants of Orbis Scientiae 1977 Appreciation is extended to Mrs Helga S Billings Mrs Elva Brady and Ms Yvonne L Leber for their skillful typing of the proceedings which they have performed with great enthusiasm and dedication Orbis Scientiae 1977 received some support from the Energy Research and Development Administration

Advanced Technology And Particle Physics - Proceedings Of The 7th International Conference On Icatpp-7 Michele Barone, Emilio Borchini, Joey Huston, Claude Leroy, Pier-giorgio Rancoita, P L Riboni, Randal C Ruchti, 2002-11-28 This

book features up to date technology applications to radiation detection It synthesises several techniques of and approaches to radiation detection covering a wide range of applications and addressing a large audience of experts and students Many of the talks are in fact reviews of particular topics often not covered in standard books and other conferences for instance the medical physics section To present these medical physics talks is crucial since a large fraction of the community in medical physics are from the particle physics community The same feature is true for astroparticle and space physics which are relatively new fields This book is unique in its scope Except for IEEE there is no other conference in the world that presents such a wide coverage of advanced technology applied to particle physics However unlike IEEE more room is made in the book for reviews and general talks

The Quark Structure of Matter Maurice Jacob,1992-11-01 Understanding the quark structure of matter has been one of the most important advances in contemporary physics It has unravelled a new and deeper level of structure in matter and physics at that level reveals a unity and aesthetic simplicity never before attained All forces emerge from a unique invariance principle and each of the basic interactions results from a specific symmetry property Quarks interact among themselves through their colour as now accurately described by quantum chromodynamics This volume brings together eight major review articles by Maurice Jacob a physicist at the forefront of research on the quark structure of matter He has in particular been involved with two research topics in this field The first is the study of hadronic jets which one actually sees instead of quarks because of the opacity of the vacuum to colour The second is the search for quark matter a new form of matter believed to exist at high temperatures when the vacuum should become transparent to colour The papers in this volume provide a comprehensive review of these phenomenological studies on the quark structure of matter and also a fascinating insight into the pace of recent progress in these areas The book comes complete with an original introduction by the author and also contains a pedagogical review on what is a most engrossing and rewarding field of research in physics
