Real World Reasoning Toward Scalable Uncertain Spatiotemporal Contextual And Causal Inference Atlantis Thinking Machines:

Real-World Reasoning: Toward Scalable, Uncertain Spatiotemporal, Contextual and Causal Inference Ben Goertzel, Nil Geisweiller, Lucio Coelho, Predrag Janičić, Cassio Pennachin, 2011-12-02 The general problem addressed in this book is a large and important one how to usefully deal with huge storehouses of complex information about real world situations Every one of the major modes of interacting with such storehouses querying data mining data analysis is addressed by current technologies only in very limited and unsatisfactory ways The impact of a solution to this problem would be huge and pervasive as the domains of human pursuit to which such storehouses are acutely relevant is numerous and rapidly growing Finally we give a more detailed treatment of one potential solution with this class based on our prior work with the Probabilistic Logic Networks PLN formalism We show how PLN can be used to carry out realworld reasoning by means of a number of practical examples of reasoning regarding human activities inreal world situations

Integration of World Knowledge for Natural Language Understanding Ekaterina Ovchinnikova, 2012-02-15 This book concerns non linguistic knowledge required to perform computational natural language understanding NLU The main objective of the book is to show that inference based NLU has the potential for practical large scale applications First an introduction to research areas relevant for NLU is given We review approaches to linguistic meaning explore knowledge resources describe semantic parsers and compare two main forms of inference deduction and abduction In the main part of the book we propose an integrative knowledge base combining lexical semantic ontological and distributional knowledge A particular attention is paid to ensuring its consistency We then design a reasoning procedure able to make use of the large scale knowledge base We experiment both with a deduction based NLU system and with an abductive reasoner For evaluation we use three different NLU tasks recognizing textual entailment semantic role labeling and interpretation of noun dependencies

Theoretical Foundations of Artificial General Intelligence Pei Wang, Ben Goertzel, 2012-08-31 This book is a collection of writings by active researchers in the field of Artificial General Intelligence on topics of central importance in the field Each chapter focuses on one theoretical problem proposes a novel solution and is written in sufficiently non technical language to be understandable by advanced undergraduates or scientists in allied fields This book is the very first collection in the field of Artificial General Intelligence AGI focusing on theoretical conceptual and philosophical issues in the creation of thinking machines All the authors are researchers actively developing AGI projects thus distinguishing the book from much of the theoretical cognitive science and AI literature which is generally quite divorced from practical AGI system building issues And the discussions are presented in a way that makes the problems and proposed solutions understandable to a wide readership of non specialists providing a distinction from the journal and conference proceedings literature The book will benefit AGI researchers and students by giving them a solid orientation in the conceptual foundations of the field which is not

currently available anywhere and it would benefit researchers in allied fields by giving them a high level view of the current state of thinking in the AGI field Furthermore by addressing key topics in the field in a coherent way the collection as a whole may play an important role in guiding future research in both theoretical and practical AGI and in linking AGI research with work in allied disciplines
