CERN., 2005 Integrated Quantum Photonics Shinichi Saito, Yong Zhang, Qin Wang, 2023-08-31 manipulating the inherent properties of quantum mechanics to develop a wide variety of novel technologies. Photons are nearly ideal carriers of quantum information, flying quantum bits due to their weak interaction with environments and relatively long coherence time. Owing to these outstanding characteristics, they are widely implemented not only in constructing quantum computing but also in developing quantum communication. Quantum technologies based on photons will potentially require integrated optical architecture for improved performance such as easy miniaturization and good scalability. Although plenty of experiments on quantum information have been performed with bulk optics, for those complicated schemes they will inevitably suffer from severe drawbacks such as poor stability, quite limited operation precision and rather bulky physical size etc. One promising candidate on conquering these weaknesses is to adopt miniaturized optical integrated devices. Until today, a large number of great researches on this aspect have been issued on different platforms. **Polymeric Nanocomposite**

Materials for Sensor Applications Jyotishkumar Parameswaranpillai, Sayan Ganguly, 2022-11-16 Polymeric Nanocomposite Materials for Sensor Applications covers all the important aspects of polymer composite based sensors from fundamentals to fabrication. Key chapters focus on the materials used for sensors and their characterization, properties, fabrication and classification. Various applications of polymeric sensors are also discussed in detail. This book is an essential reference resource not only for the materials scientist but also for researchers, academics, technologists and students working in the sensor technology industry. In modern society, sensors are used in electronics, food packaging, construction, automobile and aerospace applications. The advancement of smart technologies has increased their usage because of their affordability and reliability. Among the materials used for the fabrication of sensors, polymer composites are the most preferred because they are lightweight, versatile, low cost and easy to process. Discusses fundamentals, classification, recent progress and the current status of polymer nanocomposites in sensing applications. Includes coverage of materials and their application specific.
