Analytic and Algebraic Geometry Jeffery D. McNeal, Mircea Mustata, 2010-01-01 Analytic and algebraic geometers often study the same geometric structures but bring different methods to bear on them While this dual approach has been spectacularly successful at solving problems the language differences between algebra and analysis also represent a difficulty for students and researchers in geometry particularly complex geometry The PCMI program was designed to partially address this

language gap by presenting some of the active developments in algebraic and analytic geometry in a form suitable for students on the other side of the analysis algebra language divide One focal point of the summer school was multiplier ideals a subject of wide current interest in both subjects The present volume is based on a series of lectures at the PCMI summer school on analytic and algebraic geometry The series is designed to give a high level introduction to the advanced techniques behind some recent developments in algebraic and analytic geometry The lectures contain many illustrative examples detailed computations and new perspectives on the topics presented in order to enhance access of this material to non specialists Publisher's description Combinatorial, Computational, and Applied Algebraic Geometry Serkan Hoşten, Diane Maclagan, Frank Sottile, 2025-10-01 This volume consists of surveys on topics to which Bernd Sturmfels has contributed over his mathematical career invariant theory Gröbner bases toric ideals and varieties algebraic methods in discrete and convex optimization hypergeometric systems algebraic statistics likelihood geometry tropical geometry chemical reaction networks numerical methods in algebraic geometry sums of squares tropical geometry tensors and algebraic vision Each article gives a gentle introduction to the topic Many contributions summarize the state of the art in each subject The volume is perfect for anyone who wishes an entry point to any one of these diverse topics *Homotopy Theory and Arithmetic Geometry - Motivic and Diophantine Aspects* Frank Neumann, Ambrus Pál, 2021-09-29 This book provides an introduction to state of the art applications of homotopy theory to arithmetic geometry The contributions to this volume are based on original lectures by leading researchers at the LMS CMI Research School on Homotopy Theory and Arithmetic Geometry Motivic and Diophantine Aspects and the Nelder Fellow Lecturer Series which both took place at Imperial College London in the summer of 2018 The contribution by Brazelton based on the lectures by Wickelgren provides an introduction to arithmetic enumerative geometry the notes of Cisinski present motivic sheaves and new cohomological methods for intersection theory and Schlank's contribution gives an overview of the use of motivic homotopy theory for obstructions to the existence of rational points on algebraic varieties Finally the article by Asok and Stroh based in part on the Nelder Fellow lecture series by Stroh gives a survey of the interplay between motivic homotopy theory and affine algebraic geometry with a focus on contractible algebraic varieties Now a major trend in arithmetic geometry this volume offers a detailed guide to the fascinating circle of recent applications of homotopy theory to number theory It will be invaluable to research students entering the field as well as postdoctoral and more established researchers **Contributions to Algebraic Geometry** Piotr Pragacz, 2012 The articles in this volume are the outcome of the Impanga Conference on Algebraic Geometry in 2010 at the Banach Center in Bedlewo The following spectrum of topics is covered K3 surfaces and Enriques surfaces Prym varieties and their moduli invariants of singularities in birational geometry differential forms on singular spaces Minimal Model Program linear systems toric varieties Seshadri and packing constants equivariant cohomology Thom polynomials arithmetic questions The main purpose of the volume is to give comprehensive introductions to the above topics starting from an elementary level and

ending with a discussion of current research The first four topics are represented by the notes from the mini courses held during the conference In the articles the reader will find classical results and methods as well as modern ones This book is addressed to researchers and graduate students in algebraic geometry singularity theory and algebraic topology Most of the material in this volume has not yet appeared in book form

Machine Learning In Pure Mathematics And Theoretical Physics Yang-hui He, 2023-06-21 The juxtaposition of machine learning and pure mathematics and theoretical physics may first appear as contradictory in terms The rigours of proofs and derivations in the latter seem to reside in a different world from the randomness of data and statistics in the former Yet an often under appreciated component of mathematical discovery typically not presented in a final draft is experimentation both with ideas and with mathematical data Think of the teenage Gauss who conjectured the Prime Number Theorem by plotting the prime counting function many decades before complex analysis was formalized to offer a proof Can modern technology in part mimic Gauss's intuition The past five years saw an explosion of activity in using AI to assist the human mind in uncovering new mathematics finding patterns accelerating computations and raising conjectures via the machine learning of pure noiseless data The aim of this book a first of its kind is to collect research and survey articles from experts in this emerging dialogue between theoretical mathematics and machine learning It does not dwell on the well known multitude of mathematical techniques in deep learning but focuses on the reverse relationship how machine learning helps with mathematics Taking a panoramic approach the topics range from combinatorics to number theory and from geometry to quantum field theory and string theory Aimed at PhD students as well as seasoned researchers each self contained chapter offers a glimpse of an exciting future of this symbiosis

Hodge Theory Eduardo Cattani, Fouad El Zein, Phillip A. Griffiths, Lê Dũng Tráng, 2014-07-21 This book provides a comprehensive and up to date introduction to Hodge theory one of the central and most vibrant areas of contemporary mathematics from leading specialists on the subject The topics range from the basic topology of algebraic varieties to the study of variations of mixed Hodge structure and the Hodge theory of maps Of particular interest is the study of algebraic cycles including the Hodge and Bloch Beilinson Conjectures Based on lectures delivered at the 2010 Summer School on Hodge Theory at the ICTP in Trieste Italy the book is intended for a broad group of students and researchers The exposition is as accessible as possible and doesn't require a deep background At the same time the book presents some

topics at the forefront of current research The book is divided between introductory and advanced lectures The introductory lectures address Kähler manifolds variations of Hodge structure mixed Hodge structures the Hodge theory of maps period domains and period mappings algebraic cycles up to and including the Bloch Beilinson conjecture and Chow groups sheaf cohomology and a new treatment of Grothendieck's algebraic de Rham theorem The advanced lectures address a Hodge theoretic perspective on Shimura varieties the spread philosophy in the study of algebraic cycles absolute Hodge classes including a new self contained proof of Deligne's theorem on absolute Hodge cycles and variation of mixed Hodge structures The contributors include Patrick Brosnan James Carlson Eduardo Cattani François Charles Mark Andrea de Cataldo Fouad El Zein Mark L Green Phillip A Griffiths Matt Kerr L D Ng Tr ng Luca Migliorini Jacob P Murre Christian Schnell and Loring W Tu
