Photosynthesis: Molecular Approaches to Solar Energy Conversion Jian-Ren Shen, Kimiyuki Satoh, Suleyman I. Allakhverdiev, 2021-09-09 In the modern world to meet increasing energy demands we need to develop new technologies allowing us to use eco friendly carbon neutral energy sources Solar energy as the most promising renewable source could be the way to solve that problem but it is variable depending on day time and season From this side the understanding of photosynthesis process could be of significant help for us to develop effective strategies of solar energy capturing conversion and storage Plants algae and cyanobacteria perform photosynthesis annually producing around 100 billion tons of dry biomass Presently the detailed studies of photosynthetic system structure make functional

investigations of the photosynthetic process available allowing scientists to construct artificial systems for solar energy transduction This book summarizes exciting achievements in understanding of photosynthetic structures and mechanisms of this process made by world leaders in photosynthesis field and contains information about modern ideas in development of revolutionary new technologies of energy conversion Organized according to the natural sequence of events occurring during photosynthesis the book includes information of both photosynthetic structures and mechanisms and its applications in bioenergetics issues

Photosystem II T. Wydrzynski, Kimiyuki Satoh, 2006-01-27 The most mysterious part of photosynthesis yet the most important for all aerobic life on Earth including ourselves is how green plants algae and cyanobacteria make atmospheric oxygen from water This thermodynamically difficult process is only achieved in Nature by the unique pigment protein complex known as Photosystem II using sunlight to power the reaction The present volume contains 34 comprehensive chapters authored by 75 scientific experts from around the world It gives an up to date account on all what is currently known about the molecular biology biochemistry biophysics and physiology of Photosystem II The book is divided into several parts detailing the protein constituents functional sites tertiary structure molecular dynamics and mechanisms of homeostasis The book ends with a comparison of Photosystem II with other related enzymes and bio mimetic systems Since the unique water splitting chemistry catalyzed by Photosystem II leads to the production of pure oxygen gas and has the potential for making hydrogen gas a primary goal of this book is to provide a molecular guide to future protein engineers and bio mimetic chemists in the development of biocatalysts for the generation of clean renewable energy from sunlight and water
