in the agricultural sciences Ensuring quick and convenient perusal of highly influential topics ranging from food water and crop engineering to pest management animal maintenance and soil cultivation the Agropedia Collection will continue to update and sustain their dynamic and high quality content with editorial and advisory boards comprised of recognized specialists pioneering scholars and key note researchers in industry

Handbook of Soils and Climate in Agriculture Victor J. Kilmer, 2018-01-18 The sections in this handbook series reflect the input of different editors and advisory boards and as a consequence there is considerable variation in both the depth and coverage offered within a given area However an attempt has been made throughout to bring together pertinent information that will serve the needs of nonspecialists provide a quick reference to material that might otherwise be difficult to locate and furnish a starting point for further study The project was undertaken with the realization that the initial volumes in the series could have some obvious deficiencies that will necessitate subsequent revisions In the meantime it is felt that the primary objectives of the Sections Editors and their Advisory Boards has been met in this first Edition

Plant Breeding Reviews, Volume 8 Jules Janick, 2011-01-11 Plant Breeding Reviews is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists

Hormonal Control of Important Agronomic Traits Chi-Kuang Wen, Yunde Zhao, Yong-Ling Ruan, 2018-12-21 One of the goals of plant science is to improve agricultural sustainability increasing yield food diversity and nutrition while minimizing the negative impact on our environment In response to internal and external cues plant hormones control various aspects of plant growth and development The wealth of our knowledge on plant hormones shall greatly advance sustainable agriculture

DNA-based markers in plants R.L. Phillips, Indra K. Vasil, 2012-12-06 The double helix architecture of DNA was elucidated in 1953 Twenty years later in 1973 the discovery of restriction enzymes helped to create recombinant DNA molecules in vitro The implications of these powerful and novel methods of molecular biology and their potential in the genetic manipulation and improvement of microbes plants and animals became increasingly evident and led to the birth of modern biotechnology The first transgenic plants in which a bacterial gene had been stably integrated were produced in 1983 and by 1993 transgenic plants had been produced in all major crop species including the cereals and the legumes These remarkable achievements have resulted in the production of crops that are resistant to potent but environmentally safe herbicides or to viral pathogens and insect pests In other instances genes have been introduced that delay fruit ripening or increase starch content or cause male sterility Most of these manipulations are based on the introduction of a single gene generally of bacterial origin that regulates an important monogenic trait into the crop of choice Many of the engineered crops are now under field trials and are expected to be commercially produced within the next few years The early successes in plant biotechnology led to the realization that

further molecular improvement of plants will require a thorough understanding of the molecular basis of plant development and the identification and characterization of genes that regulate agronomically important multi-genic traits Corn Sergio O. Serna-Saldivar, 2018-11-09 Corn Chemistry and Technology Third Edition provides a broad perspective on corn from expert agronomists, food scientists and geneticists. This encyclopedic storehouse of comprehensive information on all aspects of the world's largest crop in metric tons includes extensive coverage of recent development in genetic modification for the generation of new hybrids and genotypes. New chapters highlight the importance of corn as a raw material for the production of fuel bioethanol and the emerging topic of phytochemicals or nutraceutical compounds associated to different types of corns and their effect on human health especially in the prevention of chronic diseases and cancer. Written by international experts on corn and edited by a highly respected academic, this new edition will remain the industry standard on the topic. Presents new chapters that deal with specialty corns, the production of first generation bioethanol and the important relationship of corn phytochemicals or nutraceuticals with human health. Provides contributions from a new editor and a number of new contributors who bring a fresh take on this highly successful volume. Includes vastly increased content relating to recent developments in genetic modification for the generation of new hybrids and genotypes. Contains encyclopedic coverage of grain chemistry and nutritional quality of this extensively farmed product. Covers the production and handling of corn with both food and non food applications.
