S. Department of Transportation, Federal Aviation Administration, 2013-06-11 The Advanced Avionics Handbook is a new publication designed to provide general aviation users with comprehensive information on advanced avionics equipment available in technically advanced aircraft This handbook introduces the pilot to flight operations in aircraft with the latest integrated glass cockpit advanced avionics systems This handbook is designed as a technical reference for pilots who operate aircraft with advanced avionics systems Whether flying a conventional aircraft that features a global positioning system GPS navigation receiver or a new aircraft with the latest integrated glass cockpit advanced avionics system you should find this handbook helpful in getting started The arrival of new technology to general aviation aircraft has generated noticeable changes in three areas information automation and options Pilots now have an unprecedented amount of information available at their fingertips Electronic flight instruments use innovative techniques to determine aircraft attitude speed and altitude presenting a wealth of information in one or more integrated presentations A suite of cockpit information systems provides pilots with data about aircraft position planned route engine health and performance as well as surrounding weather traffic and terrain Advanced avionics systems can automatically perform many tasks that pilots and navigators previously did by hand For example an area navigation RNAV or flight management system FMS unit accepts a list of points that define a flight route and automatically performs most of the course distance time and fuel calculations Once en route the FMS or RNAV unit can continually track the position of the aircraft with respect to the flight route and display the course time and distance remaining to each point along the planned route An autopilot is capable of automatically steering the aircraft along the route that has been entered in the FMS or RNAV system Advanced avionics perform many functions and replace the navigator and pilot in most procedures However with the possibility of failure in any given system the pilot must be able to perform the necessary functions in the event of an equipment failure Pilot ability to perform in the event of equipment failure s means remaining current and proficient in accomplishing the manual tasks maintaining control of the

aircraft manually referring only to standby or backup instrumentation and adhering to the air traffic control ATC clearance received or requested Pilots of modern advanced avionics aircraft must learn and practice backup procedures to maintain their skills and knowledge Risk management principles require the flight crew to always have a backup or alternative plan and or escape route Advanced avionics aircraft relieve pilots of much of the minute to minute tedium of everyday flights but demand much more initial and recurrent training to retain the skills and knowledge necessary to respond adequately to failures and emergencies The FMS or RNAV unit and autopilot offer the pilot a variety of methods of aircraft operation Pilots can perform the navigational tasks themselves and manually control the aircraft or choose to automate both of these tasks and assume a managerial role as the systems perform their duties Similarly information systems now available in the cockpit provide many options for obtaining data relevant to the flight Advanced avionics systems present three important learning challenges as you develop proficiency 1 How to operate advanced avionics systems 2 Which advanced avionics systems to use and when 3 How advanced avionics systems affect the pilot and the way the pilot flies
