Albert Einstein Research Papers:

The Swiss Years Albert Einstein, 1995 This volume presents Einstein's writings from the final period of his work in Switzerland. Most of the material in Volume 4 documents Einstein's search for a relativistic theory of gravitation, a search that ended in Berlin in the fall of 1915 with the completion of the general theory of relativity. Three scientific manuscripts printed here for the first time provide insights into Einstein's efforts to generalize his original relativity theory into a theory of gravitation. The first is a review article on the special theory of relativity. The second consists of notes that document Einstein's research on gravitation. The third manuscript contains calculations on the problem of the motion of the perihelion of Mercury. The explanation of the observed anomaly of this motion was to become one of the classical tests of general relativity. The existence of such a manuscript has not been known before now. All three of these manuscripts, along with other material in this volume, add significantly to our understanding of the creation of general relativity. Einstein's Miraculous Year

Albert Einstein, 2005-04-17 After 1905 physics would never be the same. In those 12 months Einstein shattered many cherished scientific beliefs with five great papers that would establish him as the world's leading physicist. On their 100th anniversary, this book brings those papers together in an accessible format. **The Collected Papers of Albert Einstein, Volume 4 (English)** Albert Einstein, 1996-08 This volume presents Einstein's writings from the final period of his work in Switzerland. Relativity Albert Einstein, 2021-10 Albert Einstein's insights into how the universe works were first revealed in 1905 with the publication of four monographs. One of these was his study *On the Electrodynamics of Moving Bodies*, which introduced his theory of gravitation and his view on special relativity. Continuing his inquiries, he found special relativity too restrictive and so formulated his theory of general relativity in the publication of *On the Relativity Principle and the Conclusions Drawn from It* in 1907. A few years later he posited his general theory of relativity in his paper *On the Influence of Gravitation on the Propagation of Light*, published in 1911. Following the validation of Einstein's theories during the solar eclipse of May 29, 1919, this edition of *Relativity*, a translation of an earlier work published in Germany, was

published by Methuen in the UK and Henry Holt in the US It and the award of the 1921 Nobel Prize in Physics brought Einstein's theories to the attention of the general public

Essays in Science Albert Einstein, 1934 **Einstein's Pathway to the Special Theory of Relativity** Galina Weinstein, 2015-06-18

This book pieces together the jigsaw puzzle of Einstein's journey to discovering the special theory of relativity Between 1902 and 1905 Einstein sat in the Patent Office and may have made calculations on old pieces of paper that were once patent drafts One can imagine Einstein trying to hide from his boss writing notes on small sheets of paper and according to reports seeing to it that the small sheets of paper on which he was writing would vanish into his desk drawer as soon as he heard footsteps approaching his door He probably discarded many pieces of papers and calculations and flung them in the waste paper basket in the Patent Office The end result was that Einstein published nothing regarding the special theory of relativity prior to 1905 For many years before 1905 he had been intensely concerned with the topic in fact he was busily working on the problem for seven or eight years prior to 1905 Unfortunately there are no surviving notebooks and manuscripts no notes and papers or other primary sources from this critical period to provide any information about the crucial steps that led Einstein to his great discovery In May 1905 Henri Poincaré sent three letters to Hendrik Lorentz at the same time that Einstein wrote his famous May 1905 letter to Conrad Habicht promising him four works of which the fourth one Relativity was a rough draft at that point In the May 1905 letters to Lorentz Poincaré presented the basic equations of his 1905 Dynamics of the Electron meaning that at this point Poincaré and Einstein both had drafts of papers relating to the principle of relativity The book discusses Einstein's and Poincaré's creativity and the process by which their ideas developed The book also explores the misunderstandings and paradoxes apparent in the theory of relativity and unravels the subtleties and creativity of Einstein

[The Collected Papers of Albert Einstein, Volume 2](#) Albert Einstein, 1990-02 This volume of The Collected Papers of Albert Einstein contains the scientific work Einstein published during the first decade of his career and includes some of the most significant achievements of twentieth century physics The first paper was written in 1900 by the twenty one year old Einstein newly graduated from the Swiss Federal Polytechnical School or ETH in Zurich and still searching in vain for a job The last paper in this volume is the text of an invited lecture given in 1909 to a major scientific meeting by Einstein after he was appointed to his first academic post at the University of Zurich He had already been

recognized as an important theoretical physicist on the basis of the work reprinted here particularly the three masterpieces that appeared in quick succession during 1905 Einstein's year of miracles In one of these papers Einstein showed how one could finally confirm the ancient view that matter is composed of discrete atoms and even measure the numbers and masses of these atoms In a second paper which even he referred to as very revolutionary he argued that the observed properties of thermal radiation suggest that it consists not of waves but rather of localized particles of energy which he called energy quanta The third and most famous paper set forth the special theory of relativity solving some long standing difficulties but requiring a significant change in our understanding of those basic concepts space and time

The Collected Papers of Albert Einstein, 1994 This volume of The Collected Papers of Albert Einstein presents Einstein's writings for the two year period starting in October 1909 The initial date marks Einstein's departure from the Swiss Patent Office at Bern which had been his professional home for seven years and the beginning of his first academic appointment at the University of Zurich The volume concludes with the masterful report that Einstein by then a full professor at the German language university in Prague gave to the original Solvay Congress the first international meeting devoted to the problems of radiation and the quantum theory Most of Einstein's efforts during these years went into his struggle with these ever more perplexing problems of quanta on which he made discouragingly little progress Einstein's new academic career naturally required him to teach and almost half of this volume consists of the previously unpublished notes he wrote in preparation for his lectures on mechanics on electricity and magnetism and on kinetic theory and statistical mechanics The last of these is particularly interesting in reflecting some of his research interests Several papers here are concerned with aspects of the special theory of relativity but it is Einstein's article of June 1911 that is a harbinger of things to come it contains his calculation of the bending of light in a gravitational field on the basis of his equivalence principle Martin J Klein is Bass Professor of the History of Science and Professor of Physics at Yale University and Senior Editor of The Collected Papers of Albert Einstein A J Kox teaches history of science at the University of Amsterdam J rgen Renn is Assistant Professor of Philosophy and Physics at Boston University and Robert Schulmann is Assistant Professor of History at Boston University

The letters touch on all aspects of Einstein's activities and shed new light on his inner life while enriching our understanding of his published papers presented in volumes 6 and 7 of this series. The breakup of Einstein's first marriage and the divorce are presented here for the first time in all their complexity. New material shows Einstein maintaining a strong sense of moral urgency throughout the war. The scientific correspondence documents Einstein's struggle to find satisfactory field equations for his new gravitational theory, the general theory of relativity, and his continued discussion with leading physicists and mathematicians about the implications and further development of the theory.

Einstein: On the Principle of Relativity

Albert Einstein, Harry Yoon, 2024-04-01. What is the Principle of Relativity? This short article is one of the very first scientific essays written by Einstein intended for the general non-scientist audience. It was originally written in 1914 for the readers of one of the most widely read newspapers in Germany at the time. Einstein published his two seminal papers on special relativity in 1905, and his work was gradually being recognized. In 1913, Max Planck and Walther Nernst made a trip to Zurich where Einstein had been mostly living throughout his young adult life to recruit Einstein back to Germany, which he agreed to. It was a triumphant return for Einstein. This article was published to celebrate this occasion and his newly earned prestige. Special relativity is based on the special principle of relativity, or simply the principle of relativity. This short newspaper article (5 pages) explains what the principle of relativity is at a very high level and what kind of general interesting phenomena are predicted from the theory. The predictions of special relativity have all been confirmed without exceptions. As for general relativity, he ended up completing his field equations of gravity at the end of 1915, and this article briefly describes why the generalization was necessary. This article was originally written by Einstein in German and is now in the public domain. This short booklet attempts at a new translation to give a somewhat clearer account of what Einstein wanted to convey in his original writing. A completely new English translation, 2024.
