Protocol Alexander R. Galloway, 2006-02-17 How Control Exists after Decentralization Is the Internet a vast arena of unrestricted communication and freely exchanged information or a regulated highly structured virtual bureaucracy In Protocol Alexander Galloway argues that the founding principle of the Net is control not freedom and that the controlling power lies in the technical protocols that make network connections and disconnections possible He does this by treating the computer as a textual medium that is based on a technological language code Code he argues can be subject to the same kind of cultural and literary analysis as any natural language computer languages have their own syntax grammar communities and cultures Instead of relying on established theoretical approaches Galloway finds a new way to write about digital media drawing on his backgrounds in computer programming and critical theory Discipline hopping is a necessity when it comes to complicated socio technical topics like protocol he writes in the preface Galloway begins by examining the types of protocols that exist including TCP IP DNS and HTML He then looks at examples of resistance and subversion hackers viruses cyberfeminism Internet art which he views as emblematic of the larger transformations now taking place within digital culture Written for a nontechnical audience Protocol serves as a necessary counterpoint to the wildly utopian visions of the Net that were so widespread in earlier days

Social Engineering Robert W. Gehl, Sean T. Lawson, 2022-03-08 Manipulative communication from early twentieth century propaganda to today's online con artistry examined through the lens of social engineering The United States is awash in manipulated information about everything from election results to the effectiveness of medical treatments Corporate social media is an especially good channel for manipulative communication with Facebook a particularly willing vehicle for it In Social Engineering Robert Gehl and Sean Lawson show that online misinformation has its roots in earlier techniques mass social engineering of the early twentieth century and interpersonal hacker social engineering of the 1970s converging today into what they call masspersonal social engineering As Gehl and Lawson trace contemporary manipulative communication back to earlier forms of social engineering possibilities for amelioration become clearer The authors show how specific manipulative communication practices are a mixture of information gathering deception and truth indifferent statements all with the instrumental goal of getting people to take actions the social engineer wants them to Yet the term fake news they claim reduces everything to a true false binary that fails to encompass the complexity of manipulative communication or to map onto many of its practices They pay special attention to concepts and terms used by hacker social engineers including the hacker concept of bullshitting which the authors describe as a truth indifferent mix of deception accuracy and sociability They conclude with recommendations for how society can undermine masspersonal social engineering and move toward healthier democratic deliberation
