Energy Efficiency in Manufacturing Systems Sebastian Thiede, 2012-04-23 Energy consumption is of great interest to manufacturing companies. Beyond considering individual processes and machines, the perspective on process chains and factories as a whole holds major potentials for energy efficiency improvements. To exploit these potentials, dynamic interactions of different processes as well as auxiliary equipment (e.g. compressed air generation) need to be taken into account. In addition, planning and controlling manufacturing systems require balancing technical, economic and environmental objectives. Therefore, an innovative and comprehensive methodology with a generic energy flow oriented manufacturing simulation environment as a core element is developed and embedded into a step-by-step application cycle. The concept is applied in its entirety to a wide range of case studies such as aluminium die casting, weaving mills and printed circuit board assembly in order to demonstrate the broad applicability and the benefits that can be achieved.

Discrete-event System Simulation Jerry Banks, John S. Carson, Barry L. Nelson, 1996 Offers comprehensive coverage of discrete event simulation, emphasizing and describing the procedures used in operations research methodology, generation and testing of random numbers, collection and analysis of input data, verification of simulation models and analysis of output data.

Ethernet-basierte Fahrzeugnetzwerkarchitekturen für zukünftige Echtzeitsysteme im Automobil Till Steinbach, 2018-09-11 Till Steinbach leistet einen Beitrag zum Design und zur Bewertung neuer Ethernet-basierter Fahrzeugnetzwerkarchitekturen. Er liefert Werkzeuge für die simulationsbasierte Analyse und Beurteilung von Netzwerkarchitekturen und evaluiert anhand konkreter Anwendungen und auf echten Verkehrsdaten aufbauender Szenarien mögliche Netzwerkdesigns und Konfigurationen. Dabei berücksichtigt der Autor auch den Übergang von Legacy-Technologien hin zu einem rein Echtzeit-Ethernet-basierten Fahrzeugnetzwerk. Auf Basis der aus analytischen Modellen sowie Simulationsstudien und einem realen Fahrzeugprototyp gewonnenen Erkenntnisse spricht er Designempfehlungen für die Entwicklung zukünftiger Ethernet-basierter Fahrzeugnetzwerke aus. Die Ergebnisse der Untersuchung führen zu Best Practices für zukünftige Backbone-Netzwerke im Automobil, in denen sich die erreichbaren Kennzahlen unter Einhaltung der

System Simulation Using Occam Lin Shiow Fen Huang,1989 **Activity Specification for Time-based Discrete Event Simulation Models** Abdurrahman Alshareef,2019 Computational models for relatively complex systems are subject to many difficulties among which is the ability for the models to be discretely understandable and applicable to specific problem types and their solutions This demands the specification of a dynamic system as a collection of models including metamodels In this context new modeling approaches and tools can help provide a richer understanding and therefore the development of sophisticated behavior in system dynamics From this vantage point an activity specification is proposed as a modeling approach based on a time based discrete event system abstraction Such models are founded upon set theoretic principles and methods for modeling and simulation with the intent of making them subject to specific and profound questions for user

defined experiments Because developing models is becoming more time consuming and expensive some research has focused on the acquisition of concrete means targeted at the early stages of component based system analysis and design The model driven architecture MDA framework provides some means for the behavioral modeling of discrete systems The development of models can benefit from simplifications and elaborations enabled by the MDA meta layers which is essential for managing model complexity Although metamodels pose difficulties especially for developing complex behavior as opposed to structure they are advantageous and complementary to formal models and concrete implementations in programming languages The developed approach is focused on action and control concepts across the MDA meta layers and is proposed for the parallel Discrete Event System Specification P DEVS formalism The Unified Modeling Language UML activity meta models are used with syntax and semantics that conform to the DEVS formalism and its execution protocol The notions of the DEVS component and state are used together according to their underlying system theoretic foundation A prototype tool supporting activity modeling was developed to demonstrate the degree to which action based behavior can be modeled using the MDA and DEVS The parallel DEVS as a formal approach supports identifying the semantics of the UML activities Another prototype was developed to create activity models and support their execution with the DEVS Suite simulator and a set of prototypical multiprocessor architecture model specifications were designed simulated and analyzed Discrete-event
