Rousselet, Cyril R. Pernet, 2012 The cognitive psychology of perception and decision making is at a cross road Most studies still employ categorical designs a priori classified stimuli and perform statistical evaluations across subjects However a shift has been observed in recent years towards parametric designs in which the information content of stimuli is systematically manipulated to study the single trial dynamics of behaviour reaction times eye movements and brain activity EEG MEG fMRI By using the information contained in the variance of individual trials the single trial approach goes beyond the activity of the average brain it reveals the specificity of information processing in individual subjects across tasks and stimulus space revealing both inter individual commonalties and differences This Research Topic provides theoretical and empirical support for the study of single trial data Topics of particular interest include 1 description of the richness of information in single trials and how it can be successfully extracted 2 statistical issues related to measures of central tendency control for multiple comparisons multivariate approaches hierarchical modelling and characterization of individual differences 3 how manipulation of the stimulus space can allow for a direct mapping of stimulus properties onto brain activity to infer dynamics of information processing and information content of brain states 4 how results from different brain imaging techniques can be integrated at the single trial level Official Gazette of the United States Patent and Trademark Office ,2002 *Fearless Cross-Platform Development with Delphi* David Cornelius, 2021-10-22 Learn to rapidly build and deploy cross platform applications from a single codebase with practical real world solutions using the mature Delphi 10 4 programming environment Key Features Implement Delphi s modern features to build professional grade Windows web mobile and IoT applications and powerful servers Become a Delphi code and project guru by learning best practices and techniques for cross

Innovative Data Integration and Conceptual Space Modeling for COVID, Cancer, and Cardiac Care Amy Neustein,Nathaniel Christen,2022-01-18 In recent years scientific research and translation medicine have placed increased emphasis on computational methodology and data curation across many disciplines both to advance underlying science and to instantiate precision medicine protocols in the lab and in clinical practice The nexus of concerns related to oncology cardiology and virology SARS CoV 2 presents a fortuitous context within which to examine the theory and practice of biomedical data curation Innovative Data Integration and Conceptual Space Modeling for COVID Cancer and Cardiac Care argues that a well rounded approach to data modeling should optimally embrace multiple perspectives inasmuch as data modeling is neither a purely formal nor a purely conceptual discipline but rather a hybrid of both On the one hand data models are designed for use by computer software components and are consequently constrained by the mechanistic demands of software environments data modeling strategies must accept the formal rigors imposed by

unambiguous data sharing and query evaluation logic In particular data models are not well suited for software level deployment if such models do not translate seamlessly to clear strategies for querying data and ensuring data integrity as information is moved across multiple points On the other hand data modeling is likewise constrained by human conceptual tendencies because the information which is managed by databases and data networks is ultimately intended to be visualized utilized by humans as the end user Thus at the intersection of both formal and humanistic methodology data modeling takes on elements of both logico mathematical frameworks e g type systems and graph theory and conceptual philosophical paradigms e g linguistics and cognitive science The authors embrace this two sided aspect of data models by seeking non reductionistic points of convergence between formal and humanistic conceptual viewpoints and by leveraging biomedical contexts viz COVID Cancer and Cardiac Care so as to provide motivating examples and case studies in this volume Provides an analysis of how conceptual spaces and related cognitive linguistic approaches can inspire programming and query processing models Outlines the vital role that data modeling curation has played in significant medical breakthroughs Presents readers with an overview of how information management approaches intersect with precision medicine providing case studies of data modeling in concrete scientific practice Explores applications of image analysis and computer vision in the context of precision medicine Examines the role of technology in scientific publishing replication studies and dataset curation
