S. Robins, 1998 The primary groundwater management issue in many countries today is pollution This may derive from a point source perhaps a leaking solvent store at a factory or it may be diffuse such as the threat posed by the use of agricultural fertilisers and pesticides The key to understanding the transport of a pollutant from the ground surface or near surface into an aquifer is an understanding of recharge In turn this allows the vulnerability of aquifers to pollution to be classified and appropriate land zones to be defined Land zonation of different classes of aquifer vulnerability is a valuable tool for management and planning In this volume the recent developments within the interlinked areas of groundwater pollution aquifer recharge and vulnerability are set against the current groundwater protection policies of the UK and Republic Ireland Heat Transfer Aziz Belmiloudi, 2011-02-14 Over the past few decades there has been a prolific increase in research and development in area of heat transfer heat exchangers and their associated technologies This book is a

collection of current research in the above mentioned areas and describes modelling numerical methods simulation and information technology with modern ideas and methods to analyse and enhance heat transfer for single and multiphase systems The topics considered include various basic concepts of heat transfer the fundamental modes of heat transfer namely conduction convection and radiation thermophysical properties computational methodologies control stabilization and optimization problems condensation boiling and freezing with many real world problems and important modern applications The book is divided in four sections Inverse Stabilization and Optimization Problems Numerical Methods and Calculations Heat Transfer in Mini Micro Systems Energy Transfer and Solid Materials and each section discusses various issues methods and applications in accordance with the subjects The combination of fundamental approach with many important practical applications of current interest will make this book of interest to researchers scientists engineers and graduate students in many disciplines who make use of mathematical modelling inverse problems implementation of recently developed numerical methods in this multidisciplinary field as well as to experimental and theoretical researchers in the field of heat and mass transfer
