Engine Design Concepts for World Championship Grand Prix Motorcycles Alberto Boretti, 2012-08-06 The World Championship Grand Prix WCGP is the premier championship event of motorcycle road racing The WCGP was established in 1949 by the sport's governing body the Fédération Internationale de Motocyclisme FIM and is the oldest world championship event in the motorsports arena This book developed especially for racing enthusiasts by motorsports engineering expert Dr Alberto Boretti provides a broad view of WCGP motorcycle racing and vehicles but is primarily focused on the design of four stroke engines for the MotoGP class The book opens with general background on MotoGP governing bodies and a history of the event's classes since the competition began in 1949 It then presents some of the key engines that have been developed and used for the competition through the years Technologies that are used in today's MotoGP engines are discussed A sidebar discussion on calculating brake indicated and friction performance parameters provides mathematical information for readers who like such technical details Future developments of MotoGP engines including the use of biofuels and recovery of thermal and braking energy are presented The introduction concludes

with a chart that details the winners of the various classes of WCGP motorcycle racing since the competition began in 1949. The bulk of the book consists of four previously published SAE technical papers that were expressly chosen by Dr Boretti to provide greater insight to the relationships between engine parameters and performance namely the influence on friction and mean effective pressure of traditional spark ignited four stroke engines tuned for a narrow high power output. The first paper provides the reader with a quick way to estimate the friction loss and engine output. The second paper discusses output and fuel consumption of multi valve motorcycle engines. The third paper published in 2002 compares WCGP engines developed to comply with the then new FIM regulations that allowed four stroke engines in the competition. The fourth paper examines specific power densities and therefore the level of sophistication and costs of MotoGP 800 cm³ engines. This paper shows the performance of these as well as the 1000cc SuperBike engines. The fifth paper presents four engine concepts including one for a MotoGP Superbike with 2 and 3 cylinders. The sixth paper compares 3 and 4 in line V4 V5 and V6 layouts through 1 D engine simulations. The seventh paper considers the actual operation of 800cc MotoGP engines on the race track where the percentage of the duration in fully open throttle is less than 20% of the race but the partial throttle is used for as much as 80% of the race. The final paper in the compendium reports on the Honda oval piston engine concept.

Design of Racing and High Performance Engines Joseph Harralson, 1995-02-01 This book presents in a clear and easy to understand manner the basic principles involved in the design of high performance engines. Editor Joseph Harralson first compiled this collection of papers for an internal combustion engine design course he teaches at the California State University of Sacramento. Topics covered include engine friction and output design of high performance cylinder heads multi cylinder motorcycle racing engines valve timing and how it effects performance computer modeling of valve spring and valve train dynamics correlation between valve size and engine operating speed how flow bench testing is used to improve engine performance and lean combustion. In addition two papers of historical interest are included detailing the design and development of the Ford D O H C competition engine and the coventry climax racing engine.

Irving,1969 **Le Vack's Legacy** Brian Thorby,2021-06-24 The largest supplier of proprietary motorcycle engines in the world J A Prestwich Co aka JAP decided to go racing with something unique in 1922 In a matter of weeks a small team headed by Val Page aided by Herbert Le Vack had produced a radical new design the first British double overhead camshaft motorcycle racing engine With this amazingly advanced engine fitted to a New Imperial frame Le Vack stunned his competitors at the 1922 Isle of Man TT From then on the engine and its successors proved invincible breaking numerous National and World Records over a four year period Yet the subsequent world recession and a world war consigned these achievements to memory and eventually bestowed upon them an almost mythological status JAP s engineering archives were discarded and the handful of engines made might well have been lost too had it not been for a series of enthusiasts In Le Vack s Legacy Brian Thorby traces the fortunes of the small number of JAP racing engines and parts that have wandered Europe for nearly a century Much has been written and illustrated about JAP ohv Speedway and V twin engines but almost nothing about their unconventional double overhead camshaft brothers until now This authoritative new account finally puts aside the myths and sets the record straight **Tuning for Speed** Philip Edward Irving,1969

Tuning for Speed Philip Edward Irving,1956 *Design of Racing and High Performance Engines* Joseph H. Harralson,1995-02-01 The Fine Art of the Motorcycle Engine Daniel Peirce,2008 By tradition the motorcycle is a naked beast differing from other vehicles by the fact that its mechanical structure is also part of its aesthetic appearance In The fine art of the motorcycle engine photographer Daniel Peirce examines the graphic nature of historic engines with stunning and dramatic photography Since the beginning of the motorbike engine designers knew they had to design power plants that performed well and looked good doing it Peirce presents 64 stunning pictures from his popular Up N Smoke Engine Project In addition to his engine photography the book also tells the story of the project and the years it took to bring it from an inspired idea to a tangible reality The story of the Up N Smoke Engine Project journals how what started as an artistic outlet became an obsession and eventually a business This is the project that Cycle World magazine called pornography for gearheads A special chapter is included showing the process that each picture needed to go through in order to create the finished product **Design of Racing and High-Performance Engines 2004-2013** Douglas Fehan,2013-02-12 This compendium is an update to two best selling editions published by SAE International in 1995 and 2003 Editor Doug Fehan

has assembled a collection of technical papers from the SAE archive that will inspire readers to use race engine development as an important tool in the future of transportation. He focuses on several topics that are important to future race engine design: electrification, materials and processes, and improved technology. Today's electric hybrid vehicles and kinetic energy recovery systems embody what inventors envisioned in the early 1900s. First employed in trams and trains of that era, the technology was almost forgotten until racers resurrected their version in 2009 F1 racing. The automotive industry has long admired the aircraft industry's use of lightweight metals, advanced finishing processes, and composites. The use of these materials and processes has helped reduce overall mass and in turn improved speed, performance, and reliability of race engines. Their initial high cost was a limiting factor for integrating them into mass-produced vehicles. With racing leading the way, those limitations were overcome, and vehicles today feature some amazing adaptations of those processes and materials. Engine power, efficiency, durability, reliability, and more recently emissions have always been of primary importance to the automotive world. The expanding use of electrification, biofuels, CNG, high pressure fuel delivery systems, combustion air management, turbocharging, supercharging, and low viscosity lubricants have been the focus of race engine development and are now turning up in dealer showrooms. The papers in this publication were selected for two reasons: they demonstrate the leadership that racing plays in the future of automotive engineering and design as it relates to engines, and they will be interesting to everyone who may be in racing and to those who may want to be in racing.
