CRC Handbook of Electrical Filters John Taylor, Qiuting Huang, 2020-11-25 Interest in filter theory and design has been growing with the telecommunications industry since the late nineteenth century. Now that telecommunications has become so critical to industry, filter research has assumed even greater importance at companies and academic institutions around the world. The CRC Handbook of Electrical Filters fills in the gaps for engineers and scientists who need a basic introduction to the subject. Unlike the currently available textbooks which are filled with detailed highly technical analysis geared to the specialist, this practical guide provides useful information for the non specialist about the various types of filters, their design and applications. The handbook covers approximation theory and methods and introduces CAD packages that perform approximation and synthesis for both analog and digital filters. Also included are design methods for LCR active RC, digital mechanical and switched capacitor SC filters. A thorough survey of current design trends rounds out this complete assessment of a key field of study.

Arithmetic Circuits for DSP Applications Pramod Kumar Meher, Thanos Stouraitis, 2017-08-31 A comprehensive guide to the fundamental concepts, designs and implementation schemes, performance considerations and applications of arithmetic circuits for DSP. Arithmetic Circuits for DSP Applications is a complete resource on arithmetic circuits for digital signal processing DSP. It covers the key concepts, designs and developments of different types of arithmetic circuits which can be used for improving the efficiency of implementation of a multitude of DSP applications. Each chapter includes various applications of the respective class of arithmetic circuits along with information on the future scope of research. Written for students, engineers and researchers in electrical and computer engineering, this comprehensive text offers a clear understanding of different types of arithmetic circuits used for digital signal processing applications. The text includes contributions from noted researchers on a wide range of topics including a review of circuits used in implementing basic operations like additions and multiplications, distributed arithmetic as a technique for the multiplier-less implementation of inner products for DSP applications, discussions on look-up-table based techniques and their key applications, CORDIC circuits for calculation of trigonometric, hyperbolic and logarithmic functions, real and complex multiplications, division and square root solution of linear systems, eigenvalue estimation, singular value decomposition, QR factorization and many other functions through the use of simple shift-add operations and much more. This book serves as a comprehensive resource which describes the arithmetic circuits as fundamental building blocks for state-of-the-art DSP and reviews in depth the scope of their applications.

Digital Processing and Reconstruction of Complex Signals Predrag B. Petrovic, Milorad R. Stevanovic, 2010-03-21 In real electronic systems, voltage and current signals are not necessarily of a periodical quantity due to the presence of nonharmonic components or and possible stochastic variation. This book presents in three parts methods for analyzing and processing and reconstructing complex signals. The first part of this book is dedicated to the

problem of measurements of the basic electric quantities in electric utilities both from the aspect of accuracy of this type of measurements and the possibilities of simple and practical realization The second part presents a reconstruction of trigonometric polynomials a specific class of band limited signals from a number of integrated values of input signals The third part deals with the problem of estimating the value of the active power of the ac signal in the presence of subharmonics and interharmonics The analysis makes use of the most general model of the voltage and current signal i e the most complex spectral content that can be expected to appear in practice *Data Science for Teams* Harris V.
