Dynamic Analysis And Design Of Offshore Structures Ocean Engineering Oceanography:

Dynamic Analysis and Design of Offshore Structures Srinivasan Chandrasekaran, 2015-02-13 This book attempts to provide readers with an overall idea of various types of offshore platform geometries. It covers the various environmental loads encountered by these structures, a detailed description of the fundamentals of structural dynamics in a class room style, estimate of damping in offshore structures and their applications in the preliminary analysis and design. Basic concepts of structural dynamics are emphasized through simple illustrative examples and exercises. Design methodologies and guidelines which are FORM based concepts are explained through a few applied example structures. Each chapter also has tutorials and exercises for self learning. A dedicated chapter on stochastic dynamics will help the students to extend the basic concepts of structural dynamics to this advanced domain of research. Hydrodynamic response of offshore structures with perforated members is one of the recent research applications which is found to be one of the effective manner of retrofitting offshore structures. Results of recent research validated by the experimental and numerical studies are presented to update of the readers. Integration of the concepts of structural dynamics with the FORM evolved design of offshore structures is a unique approach used in this book. The book will prove useful to the practicing and consulting offshore structural engineers as also to students and researchers working in the field.

LaQue's Handbook of Marine Corrosion David A. Shifler, 2022-07-01 The new edition of LaQue's classic text on marine corrosion providing fully updated control engineering practices and applications. Extensively updated throughout the second edition of LaQue's Handbook of Marine Corrosion remains the standard single source reference on the unique nature of seawater as a corrosive environment. Designed to help readers reduce operational and life cycle costs for materials in marine environments, this authoritative resource provides clear guidance on design materials selection and implementation of corrosion control engineering practices for materials in atmospheric immersion or wetted marine environments. Completely rewritten for the 21st century, this new edition reflects current environmental regulations, best practices, materials and processes with special emphasis placed on the engineering behavior and practical applications of materials. Divided into three parts, the book first explains the fundamentals of corrosion in marine environments including atmospheric corrosion, erosion, microbiological corrosion, fatigue, environmental cracking and cathodic delamination. The second part discusses corrosion control methods and materials selection that can mitigate or eliminate corrosion in different marine environments. The third section provides the reader with specific applications of corrosion engineering to structures, systems or components that exist in marine environments. This much needed new edition presents a comprehensive and up to date account of the science and engineering aspects of marine corrosion. Focuses on engineering aspects, descriptive behavior and practical applications of materials usage in marine environments. Addresses the various materials used in marine environments including metals, polymers, alloys, coatings and composites. Incorporates current regulations, standards and recommended practices of numerous organizations such as ASTM International, the US

Navy the American Bureau of Shipping the International Organization for Standardization and the International Maritime Organization Written in a clear and understandable style La Que s Handbook of Marine Corrosion Second Edition is an indispensable resource for engineers and materials scientists in disciplines spanning the naval maritime commercial shipping industries particularly corrosion engineers ship designers naval architects marine engineers oceanographers and other professionals involved with products that operate in marine environments
